Helming,2015-02-06 *Plant Phenotyping and Phenomics for Plant Breeding* Gustavo A. Lobos,Anyela V.

Camargo,Alejandro del Pozo,Jose L. Araus,Rodomi Ortiz,John H. Doonan,2018-08-16 As a consequence of the global climate change both the reduction on yield potential and the available surface area of cultivated species will compromise the production of food needed for a constant growing population There is consensus about the significant gap between world food consumption projected for the coming decades and the expected crop yield improvements which are estimated to be insufficient to meet the demand The complexity of this scenario will challenge breeders to develop cultivars that are better adapted to adverse environmental conditions therefore incorporating a new set of morpho physiological and physico chemical traits a large number of these traits have been found to be linked to heat and drought tolerance Currently the only reasonable way to satisfy all these demands is through acquisition of high dimensional phenotypic data high throughput phenotyping allowing researchers with a holistic comprehension of plant responses or Phenomics Phenomics is still under development This Research Topic aims to be a contribution to the progress of methodologies and analysis to help understand the performance of a genotype in a given environment

Whitaker's Cumulative Book List ,1975 **Hidden and Wild: An Integrated Study of European Wild Bees** Giovanni Cilia,Rosa Ranalli,Laura Zavatta,Simone Flaminio,2025-02-27 In recent years pollination has become a very important research trend and wild bees in particular play a key role in the dynamics of plant pollination This book aims to develop a pathway through the main scientific disciplines related to wild bees Starting from a taxonomic and

biogeographical context it explores key aspects of bee ecology and analyzes their various interactions with the environment. The multidisciplinary theoretical and practical approach of this book is intended to support researchers, professors, stakeholders, and non-specialists who want to learn more about this topic. In addition, the chapters dedicated to citizen science will stimulate curiosity for a practical approach to wild bees.

Abiotic Stress Signaling in Plants: Functional Genomic Intervention, Volume II Girdhar Kumar Pandey, Ashish Kumar Srivastava, Amita Pandey, Maik Böhmer, 2024-01-31. This Research Topic is part of the Abiotic Stress Signaling in Plants Functional Genomic Intervention series. Abiotic stress signaling in plants functional genomic intervention. Abiotic stresses such as high temperature, low temperature, drought, and salinity limit crop productivity worldwide. Understanding plant responses to these stresses is essential for rational engineering of crop plants. In Arabidopsis, the signal transduction pathways for abiotic stresses, light, several phytohormones, and pathogenesis have been elucidated. A significant portion of plant genomes, most studies are Arabidopsis and rice genome encodes for proteins involved in signaling such as receptor sensors, kinases, phosphatases, transcription factors, and transporters/channels. Despite decades of physiological and molecular effort, knowledge pertaining to how plants sense and transduce low and high temperature, low water availability, drought, water submergence, and salinity signals is still a major question before plant biologists. One major constraint hampering our understanding of these signal transduction processes in plants has been the lack or slow pace of application of molecular genomic and genetics knowledge in the form of gene function.
