Complex Hyperbolic Geometry Oxford Mathematical Monographs:

Complex Hyperbolic Geometry William Mark Goldman, 1999 Complex hyperbolic geometry is a particularly rich area of study enhanced by the confluence of several areas of research including Riemannian geometry complex analysis symplectic and contact geometry Lie group theory and harmonic analysis The boundary of complex hyperbolic geometry known as spherical CR or Heisenberg geometry is equally rich and although there exist accounts of analysis in such spaces there is currently no account of their geometry This book redresses the balance and provides an overview of the geometry of both the complex hyperbolic space and its boundary Motivated by applications of the theory to geometric structures moduli spaces and discrete groups it is designed to provide an introduction to this fascinating and important area and invite further research and development

Complex Hyperbolic Geometry William M. Goldman, 1992 *Geometry, Groups and Dynamics* C. S. Aravinda, William M. Goldman, Krishnendu Gongopadhyay, Alexander Lubotzky, Mahan Mj, Anthony Weaver, 2015-05-01 This volume contains the proceedings of the ICTS Program Groups Geometry and Dynamics held December 3 16 2012 at CEMS Almora India The activity was an academic tribute to Ravi S Kulkarni on his turning seventy Articles included in this volume both introductory and advanced surveys represent the broad area of geometry that encompasses a large portion of group theory finite or otherwise and dynamics in its proximity These areas have been influenced by Kulkarni's ideas and are closely related to his work and contribution

Complex Geometry of Groups Angel Carocca, 1999 This volume presents the proceedings of the Iberoamerican Congress on Geometry Cruz del Sur held in Olmu Chile The main topic was The Geometry of Groups Curves Abelian Varieties Theoretical and Computational Aspects Participants came from all over the world The volume gathers the expanded contributions from most of the participants in the Congress Articles reflect the topic in its diversity and unity and in particular the work done on the subject by Iberoamerican mathematicians Original results and surveys are included on the following areas curves and Riemann surfaces abelian varieties and complex dynamics The approaches are varied including Kleinian groups quasiconformal mappings and Teichmüller spaces function theory moduli spaces automorphism groups merican algebraic geometry and more

Geometry and Dynamics in Gromov Hyperbolic Metric Spaces Tushar Das, David Simmons, Mariusz Urbański, 2017-04-14 This book presents the foundations of the theory of groups and semigroups acting isometrically on Gromov hyperbolic metric spaces Particular emphasis is paid to the geometry of their limit sets and on behavior not found in the proper setting The authors provide a number of examples of groups which exhibit a wide range of phenomena not to be found in the finite dimensional theory The book contains both introductory material to help beginners as well as new research results and closes with a list of attractive unsolved problems

Geometry, Topology and Dynamics of Character Varieties William Goldman, 2012 This book aims to describe for readers uneducated in science the development of humanity's desire to know and understand the world around us through the various stages of its development to the present when science is almost

universally recognized at least in the Western world as the most reliable way of knowing The book describes the history of the large scale exploration of the surface of the earth by sea beginning with the Vikings and the Chinese and of the unknown interiors of the American and African continents by foot and horseback After the invention of the telescope visual exploration of the surfaces of the Moon and Mars were made possible and finally a visit to the Moon The book then turns to our legacy from the ancient Greeks of wanting to understand rather than just know and why the scientific way of understanding is valued For concreteness it relates the lives and accomplishments of six great scientists four from the nineteenth century and two from the twentieth Finally the book explains how chemistry came to be seen as the most basic of the sciences and then how physics became the most fundamental

Geometric Complex Analysis Jisoo Byun,Hong Rae Cho,Sung Yeon Kim,Kang-Hyurk Lee,Jong-Do Park,2018-09-08 The KSCV Symposium the Korean Conference on Several Complex Variables started in 1997 in an effort to promote the study of complex analysis and geometry Since then the conference met semi regularly for about 10 years and then settled on being held biannually The sixth and tenth conferences were held in 2002 and 2014 as satellite conferences to the Beijing International Congress of Mathematicians ICM and the Seoul ICM respectively The purpose of the KSCV Symposium is to organize the research talks of many leading scholars in the world to provide an opportunity for communication and to promote new researchers in this field

Geometry and Dynamics of Groups and Spaces Mikhail Kapranov,Sergii Kolyada,Yu. I. Manin,Pieter Moree,Leonid Potyagailo,2008-03-05 Alexander Reznikov 1960 2003 was a brilliant and highly original mathematician This book presents 18 articles by prominent mathematicians and is dedicated to his memory In addition it contains an influential so far unpublished manuscript by Reznikov of book length The book further provides an extensive survey on Kleinian groups in higher dimensions and some articles centering on Reznikov as a person

In the Tradition of Thurston II Ken'ichi Ohshika,Athanase Papadopoulos,2022-08-02 The purpose of this volume and of the other volumes in the same series is to provide a collection of surveys that allows the reader to learn the important aspects of William Thurston s heritage Thurston s ideas have altered the course of twentieth century mathematics and they continue to have a significant influence on succeeding generations of mathematicians The topics covered in the present volume include complex hyperbolic Kleinian groups M bius structures hyperbolic ends cone 3 manifolds Thurston s norm surgeries in representation varieties triangulations spaces of polygonal decompositions and of singular flat structures on surfaces combination theorems in the theories of Kleinian groups hyperbolic groups and holomorphic dynamics the dynamics and iteration of rational maps automatic groups and the combinatorics of right angled Artin groups
