China Confronts Climate Change Perspective:

China Confronts Climate Change Peter H. Koehn, 2015-12-14 China is an integral actor in any movement that will stabilize the global climate at conditions suited to sustainable development for its own population and for people living around the world. Assessments of China's climatic system consequences impact and responsibilities need to take into account the strengths, weaknesses, and potential of subnational governments, non-governmental organizations, transnational non-state connections, and the urban populace in reducing greenhouse gas emissions. A multitude of recent local initiatives that have engaged subnational China in actions that mitigate emissions can be enhanced by powerful framings that appeal to citizen concerns about air pollution and health conditions. *China Confronts Climate Change* offers the first fully comprehensive account of China's response to climate change based on engagement with the global climate governance literature and current debates over responsibility along with specific insights into the Chinese context. Responsible implementation of any overarching climate agreement depends on expanding China's subnational contributions. To remain fully informed about GHG emissions mitigation, China watchers and climate change monitors need to pay close attention to bottom-up developments. The book provides a valuable contemporary resource for students, scholars, and policy leaders at all levels of governance who are concerned with climate change, environmental politics, and sustainable urban development. **Toward a Public**

Theology of Climate Change Bryan Mok, 2025-10-20 How can theology shape public discourse on climate change? This book explores the urgent intersection of climate justice, public theology, and environmental communication from a Chinese Christian perspective. As the world grapples with climate apocalypse, this study reveals how religious discourse can influence public opinion and policymaking. Engaging with global and Chinese contexts, it evaluates competing theological approaches and proposes a framework for a public theology of climate change. With insights into environmental activism, political deliberation, and ethical responsibility, this book equips theologians, religious scholars, and climate activists to rethink the role of religion in the fight against climate change. **Climate Change Law in China in Global Context** Xiangbai He, Hao

Zhang, Alexander Zahar, 2020-05-31 In *Climate Change Law in China in Global Context*, seven climate change law scholars explain how the country's legal system is gradually being mobilized to support the reduction of greenhouse gas emissions in China and achieve adaptation to climate change. There has been little English scholarship on the legal regime for climate change in China. This volume addresses this gap in the literature and focuses on recent attempts by the country to build defences against the impacts of climate change and to meet the country's international obligations on mitigation. The authors are not only interested in China's laws on paper; rather, the book explains how these laws are implemented and integrated in practice and sheds light on China's current laws, laws in preparation, the changing standing of law relative to policy, and the further reforms that will be necessary in response to the 2015 Paris Agreement on Climate Change. This comprehensive and critical account of the Chinese legal system's response to the pressures of climate change will be an important resource for

renewables revolution from a top down interpretation McLean presents an in depth analysis of the external ramifications of China's solar and wind dominance across the Global South in the areas of green technological trade project construction and regime financing This research provides a convincing explanation for why Chinese coal incumbents have been proactive overseas in spite of the country's clean energy dominance and Beijing's climate commitments Finally the book argues that China's low carbon prowess has longer term significance for the Global South and in addition contributes to the rising debates over the geopolitics of renewable transition in a complex multipolar world This volume will be of great interest to students and scholars of Chinese energy policy and foreign relations energy markets in the Global South international politics and the wider global energy transition field *Climate Change and the Future of Democracy* R.
