Consent of the Networked Rebecca MacKinnon, 2013-04-23 The future of your freedom depends on whether you assert your rights within the digital spaces you inhabit But as corporations and countries square off on and over the internet the likely losers are us

Waste Is Information Dietmar Offenhuber, 2023-12-05 The relationship between infrastructure governance and the ways we read and represent waste systems examined through three waste tracking and participatory sensing projects Waste is material information Landfills are detailed records of everyday consumption and behavior much of what we know about the distant past we know from discarded objects unearthed by archaeologists and interpreted by historians And yet the systems and infrastructures that process our waste often remain opaque In this book Dietmar Offenhuber examines waste from the perspective of information considering emerging practices and technologies for making waste systems legible and how the resulting datasets and visualizations shape infrastructure governance He does so by looking at three waste tracking and participatory sensing projects in Seattle S o Paulo and Boston Offenhuber expands the notion of urban legibility the idea that the city can be read like a text to introduce the concept of infrastructure legibility He argues that infrastructure governance is enacted through representations of the infrastructural system and that these representations stem from the different stakeholders interests which drive their efforts to make the system legible The Trash Track project in Seattle used sensor technology to map discarded items through the waste and recycling systems the Forager project looked at the informal organization processes of waste pickers working for Brazilian recycling cooperatives and mobile systems designed by the city of Boston allowed residents to report such infrastructure failures as potholes and garbage spills Through these case studies Offenhuber outlines an emerging paradigm of infrastructure governance based on a complex negotiation among users technology and the city

Critique, Social Media and the Information Society

Christian Fuchs, Marisol Sandoval, 2013-11-26 In times of global capitalist crisis we are witnessing a return of critique in the form of a surging interest in critical theories such as the critical political economy of Karl Marx and social rebellions as a reaction to the commodification and instrumentalization of everything On one hand there are overdrawn claims that social media Twitter Facebook YouTube etc have caused uproars in countries like Tunisia and Egypt On the other hand the question arises as to what actual role social media play in contemporary capitalism crisis rebellions the strengthening of the commons and the potential creation of participatory democracy The commodification of everything has resulted also in a commodification of the communication commons including Internet communication that is today largely commercial in character This book deals with the questions of what kind of society and what kind of Internet are desirable how capitalism power structures and social media are connected how political struggles are connected to social media what current developments of the Internet and society tell us about potential futures how an alternative Internet can look like and how a participatory commons based Internet and a co operative participatory sustainable information society can be achieved

Let 100 Voices Speak Liz Carter, 2015-07-16 From the Occupy movement in the Western world to the Arab Spring and the role of Twitter in the Middle East the internet and social media is changing the global landscape China is next Despite being a heavily censored society China has over 560 million active internet users more than double that of the USA In this book social media expert and China watcher Liz Carter tells the story of how the internet in China is leading to a coming together of activists ordinary people and cultural trendsetters on a scale unknown in modern history News about protests and natural disasters or gossip and satirical jokes are practically uncensorable and spread quickly through Weibo the Chinese Twitter and the Chinese internet underground More than that a grassroots foundational shift of assumptions and expectations is taking place as Chinese men and women cast off the communistera stability at all costs mantra and find new forms of selfexpression creativity and communication with the world

The Blockchain and the New Architecture of Trust Kevin Werbach, 2023-08-15 How the blockchain a system built on foundations of mutual mistrust can become trustworthy The blockchain entered the world on January 3 2009 introducing an innovative new trust architecture an environment in which users trust a system for example a shared ledger of information without necessarily trusting any of its components The cryptocurrency Bitcoin is the most famous implementation of the blockchain but hundreds of other companies have been founded and billions of dollars invested in similar applications since Bitcoin s launch Some see the blockchain as offering more opportunities for criminal behavior than benefits to society In this book Kevin Werbach shows how a technology resting on foundations of mutual mistrust can become trustworthy The blockchain built on open software and decentralized foundations that allow anyone to participate seems like a threat to any form of regulation In fact Werbach argues law and the blockchain need each other Blockchain systems that ignore law and governance are likely to fail or to become outlaw technologies irrelevant to the mainstream economy That Werbach cautions would be a tragic waste of potential If however we recognize the blockchain as a kind of legal technology that shapes behavior in new ways it can be harnessed to create tremendous business and social value

China's Digital Nationalism Florian Schneider, 2018-08-16 Nationalism in China as much as elsewhere is today adopted filtered transformed enhanced and accelerated through digital networks And as we have increasingly seen nationalism in digital spheres interacts in complicated ways with nationalism on the ground If we are to understand the social and political complexities of the twenty first century we need to ask what happens to nationalism when it goes digital In China s Digital Nationalism Florian Schneider explores the issue by looking at digital China first hand exploring what search engines online encyclopedias websites hyperlink networks and social media can tell us about the way that different actors construct and manage a crucial topic in contemporary Chinese politics the protracted historical relationship with neighbouring Japan Using two cases the infamous Nanjing Massacre of 1937 and the ongoing disputes over islands in the East China Sea Schneider shows how various stakeholders in China construct networks and deploy power to shape nationalism for their own ends These dynamics provide crucial lessons on how nation states adapt to the shifting

terrain of the digital age and highlight how digital nationalism is today an emergent property of complex communication networks

Social Media in the Arab World Barrie Gunter, Mokhtar Elareshi, Khalid Al-Jaber, 2016-04-21 Following the Arab Spring the use of social media has become instrumental in organising activist movements and spreading political dissent in the Middle East New online behaviours have transformed traditional communication channels enabling young people of all backgrounds to feel politically empowered But now that spring has turned to winter what are the long term implications of internet activism in the region Social Media in the Arab World provides a unique insight into the role of online communications as a force for change in the Gulf States Featuring examples as diverse as neo patrimonial politics in Saudi Arabia and the ways an online presence affects the status of women in Kuwait the chapters examine shifts in the political social and religious identities of citizens as a result of increased digital activism With contributions from a variety of interdisciplinary experts this wide ranging study examines the consequences of changing power dynamics brought about by popular social media In doing so this book offers an original perspective on the long term implications of internet usage in the Arab world and is essential reading for students and researchers working across the region

Handbook of Innovation and Standards Richard Hawkins, Knut Blind, Robert Page, 2017-08-25 Innovation and standardization might seem polar opposites but over many years various scholars have noted close connections between the two This Handbook assembles a broad range of thinking on this subject with contributions from several disciplinary perspectives by over 30 leading scholars and experienced practitioners Collectively they summarize and synthesize the existing body of knowledge theory and evidence pertaining to standards and innovation and provide insights into how this knowledge can be useful to scholars industrial strategists policy makers and standards practitioners

Gaming the System David J. Gunkel, 2018-05-09 1 This extremely multidisciplinary book engages descriptive and prescriptive methods of study to video games drawing heavily on philosophical traditions It will have appeal outside of Film Media and Philosophy to other areas of scholarly research including Sociology Anthropology and Political Science 2 The author is a senior scholar with extensive publications that explore the intersection of philosophy and ethics with digital games and reality He has a strong presence on Facebook and Twitter as well as a well designed personal website He has historically been very engaged with his own digital and social media marketing for books he authors and plans to do the same for this title 3 The author works to debunk and reframe what readers think they know about video games and digital culture showing that it is wrong or at least misguided and that the important questions are often far more interesting and potentially disturbing than anticipated

The Zero Marginal Cost Society Jeremy Rifkin, 2014-04-01 The New York Times bestselling author describes how current trends will create an era when anything and everything is available for almost nothing In *The Zero Marginal Cost Society* New York Times bestselling author Jeremy Rifkin uncovers a paradox at the heart of capitalism that has propelled it to greatness but is now taking it to its death the inherent entrepreneurial dynamism of competitive markets that drives productivity up and marginal costs down

enabling businesses to reduce the price of their goods and services in order to win over consumers and market share

Marginal cost is the cost of producing additional units of a good or service if fixed costs are not counted While economists have always welcomed a reduction in marginal cost they never anticipated the possibility of a technological revolution that might bring marginal costs to near zero making goods and services priceless nearly free and abundant and no longer subject to market forces Now a formidable new technology infrastructure the Internet of things IoT is emerging with the potential of pushing large segments of economic life to near zero marginal cost in the years ahead Rifkin describes how the Communication Internet is converging with an Energy Internet and Logistics Internet to create a new technology platform that connects all There are billions of sensors feeding Big Data into an IoT global neural network Prosumers can connect to the network and use Big Data analytics and algorithms to accelerate efficiency dramatically increase productivity and lower the marginal cost of producing and sharing a wide range of products and services to near zero just like they now do with information goods The plummeting of marginal costs is spawning a hybrid economy part capitalist market and part Collaborative Commons with far reaching implications for society according to Rifkin Hundreds of millions of people are already transferring parts of their economic lives to the global Collaborative Commons Prosumers are plugging into the IoT and making and sharing their own information entertainment green energy and 3D printed products at near zero marginal cost Students are enrolling in free massive open online courses MOOCs that operate at near zero marginal cost Social entrepreneurs are even bypassing the banking establishment and using crowdfunding to finance startup businesses as well as creating alternative currencies in the fledgling sharing economy In this new world social capital is as important as financial capital access trumps ownership sustainability supersedes consumerism cooperation ousts competition and exchange value in the capitalist marketplace is increasingly replaced by sharable value on the Collaborative Commons Rifkin concludes that capitalism will remain with us albeit in an increasingly streamlined role primarily as an aggregator of network services and solutions allowing it to flourish as a powerful niche player in the coming era We are however says Rifkin entering a world beyond markets where we are learning how to live together in an increasingly interdependent global Collaborative Commons
