

Installing Shingles on Special Shaped Roofs

9

YOUR OBJECTIVE:

To learn how to apply shingles to roof shapes other than the standard straight gable.

The application instructions for each of the CertainTeed products in the middle chapters of this manual are intended for a standard straight gable roof. You will encounter other roof shapes where the methods for the standard roof will not be entirely appropriate. This chapter contains supplementary instructions that will enable you to handle the special problems encountered in hip roofs, cone- or turret-shaped roofs, and dormers. There is also a discussion of how to finish a dormer ridge cap that ties into the field of a roof.

HIP ROOF APPLICATION

METHODS

Most shingles can be applied to hip roofs by employing either of two methods — the racking method or the diagonal method. The choice depends on the application instructions for the shingle being applied. The racking method is the only recommended method for some shingles and is designated as an alternative method for others. At the same time, the diagonal method is the only method recommended for other shingles. Refer to the approved application method(s) in the chapter for the specific shingle being installed.

THE DIAGONAL METHOD

A. UNDERLAYMENT AND THE STARTER COURSE

1. It is recommended that WinterGuard™ Waterproofing Underlayment be used across the hips. Apply the WinterGuard centered on the hips before applying ordinary underlayment to the rest of the roof. (If WinterGuard is used along the eaves for protection against ice dams, apply it first, and then lap the WinterGuard from the hip over it.)
2. Strike a chalk line perpendicular to the eaves from the ridge to the eaves to serve as a vertical reference. Strike horizontal lines as necessary to assure course alignment. (The vertical reference should be on the left side of the roof in the vicinity of where the hip meets the ridge.)
3. Install starter strips as directed in the application instructions for the shingle being applied. Overlap the vertical reference line by the measured half tab-length portion of the shingle instead of cutting it off. The starter strip should extend the entire length of the eaves (see Figure 9-1).

Figure 9-1: Starter strip overlapping the vertical reference line.

B. INSTALLING THE FIRST DIAGONAL SECTION

1. Install the first shingle of the first course with the left edge aligned with the vertical reference line (see Figure 9-2).

Figure 9-2: Installing the first shingle of the first course with the left edge aligned with the vertical reference line

2. Apply the first shingle of each course above the first course by overlapping the reference line by the required amount as directed by the application instructions for the product. **DO NOT** nail the left end of these shingles at this time. (There will be a total of four or six courses per diagonal section depending on the product being installed.) (See Figure 9-3).

Figure 9-3: Section 1-4

3. Before continuing up the roof section, apply one shingle immediately to the right of each shingle of the completed first section (see Figure 9-4, Section 1B).
