Design Patterns For Embedded Systems In C:

Design Patterns for Embedded Systems in C Bruce Powel Douglass, 2010-11-03 A recent survey stated that 52% of embedded projects are late by 4-5 months. This book can help get those projects in on time with design patterns. The author carefully takes into account the special concerns found in designing and developing embedded applications specifically concurrency, communication speed, and memory usage. Patterns are given in UML Unified Modeling Language with examples including ANSI C for direct and practical application to C code. A basic C knowledge is a prerequisite for the book while UML notation and terminology is included. General C programming books do not include discussion of the constraints found within embedded system design. The practical examples give the reader an understanding of the use of UML and OO Object Oriented designs in a resource limited environment. Also included are two chapters on state machines. The beauty of this book is that it can help you today. Design Patterns within these pages are immediately applicable to your project. Addresses embedded system design concerns such as concurrency, communication, and memory usage. Examples contain ANSI C for ease of use with C programming code.

Transactions on Pattern Languages of Programming IV James Noble, Ralph Johnson, Uwe Zdun, Eugene Wallingford, 2019-03-04 The Transactions on Pattern Languages of Programming subline aims to publish papers on patterns and pattern languages as applied to software design development and use throughout all phases of the software life cycle from requirements and design to implementation, maintenance, and evolution. The primary focus of this LNCS Transactions subline is on patterns, pattern collections, and pattern languages themselves. The journal also includes reviews, survey articles, criticisms of patterns and pattern languages, as well as other research on patterns and pattern languages. This book, the third volume in the Transactions on Pattern Languages of Programming series, presents five papers that have been through a careful peer review process involving both pattern experts and domain experts. The papers present various pattern languages and a study of applying patterns and represent some of the best work that has been carried out in design patterns and pattern languages of programming over the last few years.
