Human Benefit through the Diffusion of Information Systems Design Science Research Jan Pries-Heje, John J. Venable, Deborah Bunker, Nancy L. Russo, Janice I. DeGross, 2010-03-10 This book constitutes the proceedings of the 2010 Joint International Working Conference of the International Federation for Information Processing Working Groups 8.2 and 8.6 Both working groups are part of IFIP Technical Committee 8 the technical committee addressing the field of Information Systems IFIP WG 8.2 the Interrelation of Information Systems and Organizations was established in 1977 IFIP WG 8.6 Diffusion Transfer and

Implementation of Information Technology was established in 1994. In accordance with their respective themes both IFIP WG 8.2 and IFIP WG 8.6 have long had an interest in the human impact of information systems. In December 1998 they held a joint working conference in Helsinki, Finland, on the theme 'Information Systems: Current Issues and Future Challenges'. The two working groups' joint interest in and collaboration on research concerning the human side of IS is continued and extended through this joint working conference held on the campus of Curtin University of Technology from March 30 to April 1, 2010, in Perth, Western Australia. This conference, 'Human Benefit Through the Diffusion of Information Systems Design Science Research', combines the traditional themes of the two working groups with the growing interest within the IS research field in the area of design science research.

Designing the Information Systems Artefact Robert Winter, 2025-08-30. This book provides essential methodological guidance on IS artifacts to address key challenges in Design Science Research (DSR). As a foundation for understanding and categorizing DSR artifacts, it proposes a more differentiated empirically justified DSR artifact typology. Additionally, it presents an artifact type agnostic architecture model for DSR project knowledge, offering concrete recommendations for researchers and practitioners alike. As most DSR artifacts exist on a wide range of abstraction levels, an artifact type agnostic perspective of abstraction is presented, and a set of fundamental generalization and contextualization operations is proposed. The concept of managed evolution and insights from tension theory are used to propose a collaboration model fostering effective interaction between researchers and practitioners in DSR. Finally, by associating empirically validated classes of functional requirements with solution classes, candidates for general constructional patterns are developed. All chapters share a contemporary understanding of DSR artifacts as complex combinations of IT, organizational, and use elements ranging from algorithms to informal interventions in organizations. These artifacts are based on both descriptive knowledge and empirical justifications or ideally both and are exemplified by contextualized instantiations that solve situated problems in organizations or administrations. This book provides a unified and practical approach to advancing DSR, offering insights for both advanced academic researchers and industry practitioners whose work involves IS artifacts.
