Critical Issues In Systems Theory And Practice Language Of Science:

Critical Issues in Systems Theory and Practice K. Ellis, Amanda J. Gregory, B.R. Mears-Young, Gillian Ragsdell, 2013-06-29 The systems movement now 40 years old is made up of many associations of systems thinkers from different disciplines all over the world The United Kingdom Systems Society UKSS was formed in 1978 Today it has over 300 members and is committed to the development and promotion of systems philosophy theory concepts and methodologies for improving decision making for the benefit of organizations and wider society The first UKSS International Conference was held at the University of Hull in July of Huddersfield 1989 Since then we have held International Conferences at the Universities 1991 and Paisley 1993 The UKSS International Conferences are now an established biannual event and this our fourth international conference will be jointly hosted by the Universities of Hull and Humberside Systems science is considered to be a trans discipline which promotes critical and effective intervention in complex organisational and social problem situations As such it traverses hard through soft to critical systems thinking and methodologies Yet despite the currently robust state of the UKSS the systems movement cannot be described as an international movement different subdisciplines are at different stages of development and are often engaged in pursuing their own particular interests and themes with little conversation between the subdisciplines despite their common interest in systems *Systems for Sustainability* Frank A. Stowell, Ray L. Ison, Rosalind Armson, Jacky Holloway, Sue Jackson, Steve McRobb, 2013-11-11 The term sustainability has entered the lexicon of many academic disciplines and fields of professional practice but to date does not appear to have been seriously considered within the systems community unless perhaps under other guises Within the wider community there is no consensus around what sustainability means with some authors identifying 70 to 100 definitions of the term Some see sustainability as the precise and quantifiable outcomes of biological systems whilst others see it in terms of processes relevant to personal and organizational change with the potential to effect changes in our relationships with our environments Internationally it has been increasingly used in relation to the term sustainable development a term popularised by the Brundtland Commission's report in 1987 entitled Our Common Future Despite this diversity and polarised perception on its utility unlike many other popular terms it has not had its time and subsided quietly from our language It is therefore timely for the systems community to explore the relationship between systems and sustainability in a range of contexts Participants in this the 5th International Conference of the United Kingdom Systems Society UKSS have been invited to reflect critically on the contribution of systems thinking and action to sustainability to the sustainability of personal relationships the organizations in which live and work and our natural environment [Proceedings of the SSEME Workshop on Social Sciences and Education \(SSEME-SSE 2023\)](#) Jia Li, 2023-09-21 This is an open access book SSEME workshop on social sciences and education serves as an international platform for scholars and engineers from around the world with the focus on education and other social sciences related fields It aims to promote scientific information
