Safety-critical Computer Systems Neil Storey, 1996 Increasingly microcomputers are being used in applications where their correct operation is vital to ensure the safety of the public and the environment from anti lock braking systems in automobiles to fly by wire aircraft to shut down systems at nuclear power plants It is therefore vital that engineers be aware of the safety implications of the systems they develop This book is an introduction to the field of safety critical computer systems written for any engineer who uses microcomputers within real time embedded systems It assumes no prior knowledge of safety or of any specific computer hardware or programming language This text is intended for both engineering and computer science students and for practising engineers within computer related industries The approach taken is equally suited to engineers who consider computers from a hardware software or systems viewpoint

Committee's work has reflected this. The Committee has been sponsored by the Commission of the European Communities since 1978. During this period there has been the opportunity to observe the enthusiasm and dedication in the activities of the group, the expertise and effort invested in its work, the discipline in meeting objectives and the quality of the resulting guidelines. I am convinced that all computer system developers who use them will greatly enhance their chances of achieving quality systems.
