

표준 CNC 3차원 측정기(CMM) CRISTA-APEX S

- 미쓰도요의 풍부한 경험과 CNC CMM 기술로 설계 및 제작
- 경량 소재와 혁신적인 장비 구조
- 뛰어난 동작안정성, 고정밀도 보증
- 온도보정 기능($16^{\circ}\text{C} \sim 26^{\circ}\text{C}$)으로 정확한 측정가능
- 적용분야: 형상길이 측정분야, 자동차, 반도체 설비부품, 디스플레이 후면, 전자장비 산업

Machining For Dummies Kip Hanson, 2017-11-06 Start a successful career in machining Metalworking is an exciting field that is currently experiencing a shortage of qualified machinists and there is no time like the present to capitalize on the recent surge in manufacturing and production opportunities Covering everything from lathe operation to actual CNC programming *Machining For Dummies* provides you with everything it takes to make a career for yourself as a skilled machinist Written by an expert offering real world advice based on experience in the industry this hands on guide begins with basic topics like tools work holding and ancillary equipment then goes into drilling milling turning and other necessary metalworking processes You will also learn about robotics and new developments in machining technology that are driving the future of manufacturing and the machining market Be profitable in today's competitive manufacturing environment Set up and operate a variety of computer controlled and mechanically controlled machines Produce precision metal parts instruments and tools Become a part of an industry that is experiencing steady growth Manufacturing is the backbone of America and this no nonsense guide will provide you with valuable information to help you get a foot in the door as a machinist

Precision Metal Additive Manufacturing Richard Leach, Simone Carmignato, 2020-09-21 Additive manufacturing AM is a fast growing sector with the ability to evoke a revolution in manufacturing due to its almost unlimited design freedom and its capability to produce personalised parts locally and with efficient material use AM companies however still face technological challenges such as limited precision due to shrinkage built in stresses and limited process stability and robustness Moreover often post processing is needed due to high roughness and remaining porosity Qualified trained personnel are also in short supply In recent years there have been dramatic improvements in AM design methods process control post processing material properties and material range However if AM is going to gain a significant market share it must be developed into a true precision manufacturing method The production of precision parts relies on three principles Production is robust i.e. all sensitive parameters can be controlled Production is predictable for example the shrinkage that occurs is acceptable because it can be predicted and compensated in the design Parts are measurable as without metrology accuracy repeatability and quality assurance cannot be known AM of metals is inherently a high energy process with many sensitive and inter related process parameters making it susceptible to thermal distortions defects and process drift The complete modelling of these processes is beyond current computational power and novel methods are needed to practicably predict performance and inform design In addition metal AM produces highly textured surfaces and complex surface features that stretch the limits of contemporary metrology With so many factors to consider there is a significant shortage of background material on how to inject precision into AM processes Shortage in such material is an important barrier for a wider uptake of advanced manufacturing technologies and a comprehensive book is thus needed This book aims to inform the reader how to improve the precision of metal AM processes by tackling the three principles of robustness predictability and

metrology and by developing computer aided engineering methods that empower rather than limit AM design Richard Leach is a professor in metrology at the University of Nottingham and heads up the Manufacturing Metrology Team Prior to this position he was at the National Physical Laboratory from 1990 to 2014 His primary love is instrument building from concept to final installation and his current interests are the dimensional measurement of precision and additive manufactured structures His research themes include the measurement of surface topography the development of methods for measuring 3D structures the development of methods for controlling large surfaces to high resolution in industrial applications and the traceability of X ray computed tomography He is a leader of several professional societies and a visiting professor at Loughborough University and the Harbin Institute of Technology Simone Carmignato is a professor in manufacturing engineering at the University of Padua His main research activities are in the areas of precision manufacturing dimensional metrology and industrial computed tomography He is the author of books and hundreds of scientific papers and he is an active member of leading technical and scientific societies He has been chairman organiser and keynote speaker for several international conferences and received national and international awards including the Taylor Medal from CIRP the International Academy for Production Engineering *Advances in Design Engineering* Francisco Cavas-Martínez, Félix Sanz-Adan, Paz Morer Camo, Ruben Lostado Lorza, Jacinto Santamaría Peña, 2020-03-09 This book gathers the papers presented at the XXIX International Congress INGEGRAF The digital transformation in graphic engineering which was held in Logroño Spain on June 20 21 2019 It reports on cutting edge topics in product design and manufacturing such as industrial methods for integrated product and process design innovative design and computer aided design Further topics covered include virtual simulation and reverse engineering additive manufacturing product manufacturing engineering methods in medicine and education representation techniques and design and modeling for nautical engineering and construction aeronautics and aerospace contexts The book is divided into six main sections reflecting the focus and primary themes of the conference The contributions presented here will not only provide researchers engineers and experts in a range of industrial engineering subfields with extensive information to support them in their daily work but will also stimulate new research directions advanced applications of the methods discussed and future interdisciplinary collaborations
