Oracle DBA Checklists Pocket Reference Quest Software, 2001-04-06 Oracle database administration is a complex and stressful job. In a series of easy to use checklists this concise pocket reference summarizes the enormous number of tasks you must perform as an Oracle DBA. Each section takes a step by step cookbook approach to presenting DBA quick reference material. The Oracle DBA Checklists Pocket Reference is divided into three major sections covering the main areas of an Oracle DBA's responsibilities: Database management Describes how to maintain existing databases with a checklist of daily, weekly and monthly activities; prepare new databases for production and back up and recover databases with checklists for how to recover tables, data files, index files, control files, rollback segments and active and inactive redo logs; Installation and configuration Contains a summary of key procedures for installation on Unix, Windows NT and VMS platforms. Also includes special steps for configuring a parallel database; Network management Helps with installing, configuring and testing Net8 software on server and client machines. Tasks include confirming network availability and Net8 connectivity, verifying Net8 name resolution, configuring Net8 clients with LDAP or Oracle Names, configuring Net8 on the server, configuring the Multi Threaded Server (MTS), tracing client connections and tracing the Net8 listener. This book's quick reference step by step approach takes the stress out of DBA problem solving by making it easy to find the information you need and find it fast.

Oracle PL/SQL Built-ins Pocket Reference Steven Feuerstein, John Beresniewicz, Chip Dawes, 1998 This pocket reference provides quick reference information that will help you use Oracle Corporation's extensive set of built in functions and packages including those new to Oracle8. Oracle's PL/SQL language is a programming language providing procedural extensions to the SQL relational database language and to an ever growing number of Oracle development tools. Among the most useful constructs in the PL/SQL language are the built in functions and packages. Built in functions are constructs that operate on certain types of data e.g. numeric, character to return a result. By using functions you can minimize the coding you need to do in your programs. Functions are described in detail in Steven Feuerstein's *Oracle PL/SQL Programming*; this comprehensive guide to building applications with PL/SQL has become the bible for PL/SQL developers who have raved about its completeness, readability and practicality. Built in functions fall into several major categories: Character functions Operate on character data. Examples include CONCAT concatenates two strings into one, LENGTH returns the length of a string and REPLACE replaces a character sequence in a string with a different set of characters. Date functions Operate on dates and supplement the DATE datatype. Examples include SYSDATE returns the current date and time in the Oracle Server and LAST_DAY returns the last day in the month of the specified date. Numeric functions Operate on numeric data. Examples include CEIL returns the smallest integer greater than or equal to the specified number and POWER returns a number raised to a particular power. LOB functions Operate on large object data. Examples include EMPTY_BLOB returns an empty locator of the binary large object type and EMPTY_CLOB returns an empty locator of the character large object type. Conversion

functions Perform explicit conversions of different types of data Examples include TO_CHAR converts a number or date to a string and TO_NUMBER converts a string to a number Miscellaneous functions Examples include GREATEST returns the greatest of the specified list of values and UID returns the user ID of the current Oracle session Built in packages collections of PL SQL objects such as functions procedures and data structures greatly expand the scope of the PL SQL language These packages are described in detail in Feuerstein s and Beresniewicz s book Oracle Built in Packages Built in packages are built by Oracle Corporation and stored directly in the Oracle database The functionality of the built ins is available from any programming environment that can call PL SQL stored procedures including Visual Basic Oracle Developer 2000 Oracle Application Server for Web based development and of course the Oracle database itself Built in packages extend the capabilities and power of PL SQL in many significant ways For example DBMS_SQL executes dynamically constructed SQL statements and PL SQL blocks of code DBMS_PIPE communicates between different Oracle sessions through a pipe in the RDBMS shared memory DBMS_JOB submits and manages regularly scheduled jobs for execution inside the database DBMS_LOB accesses and manipulates Oracle8 s large objects LOBs from within PL SQL programs The book shows how to call all of the commonly used built in functions and packages For packages it also shows the RESTRICT REFERENCES pragmas needed if you call packages from a SQL statement as well as the exceptions constants and data structures defined in the packages
