Petry, 2006-01-16 The development of net centric approaches for intelligence and national security applications has become a major concern in many areas such as defense intelligence and national and international law enforcement agencies In this volume we consider the web architectures and recent developments that make n centric approaches for intelligence and national security possible These include developments in information integration and recent advances in web services including the concept of the semantic web Discovery analysis and management of web available data pose a number of interesting challenges for research in w based management systems Intelligent agents and data mining are some of the techniques that can be employed A number of specific systems that are net centric based in various areas of military applications intelligence and law enforcement are presented that utilize one or more of such techniques The opening chapter overviews the concepts related to ontologies which now form much of the basis of the possibility of sharing

of information in the Semantic Web In the next chapter an overview of Web Services and examples of the use of Web Services for net centric operations as applied to meteorological and oceanographic MetOc data is presented and issues related to the Navy s use of MetOc Web Services are discussed The third chapter focuses on metadata as conceived to support the concepts of a service oriented architecture and in particular as it relates to the DoD Net Centric Data Strategy and the NCES core services

Software Engineering of Fault Tolerant Systems P. Pelliccione,2007 In architecting dependable systems what is required to improve the overall system robustness is fault tolerance Many methods have been proposed to this end the solutions are usually considered late during the design and implementation phases of the software life cycle e g Java and Windows NT exception handling thus reducing the effectiveness error and fault handling Since the system design typically models only normal behaviour of the system while ignoring exceptional ones the implementation of the system is unable to handle abnormal events Consequently the system may fail in unexpected ways due to faults It has been argued that fault tolerance management during the entire life cycle improves the overall system robustness and that different classes of threats need to be identified for and dealt with at each distinct phase of software development depending on the abstraction level of the software system being modelled This book builds on this trend and investigates how fault tolerance mechanisms can be applied when engineering a software system In particular it identifies the new problems arising in this area introduces the new models to be applied at different abstraction levels defines methodologies for model driven engineering of such systems and outlines the new technologies and validation and verification environments supporting this
