

SECTION I

description

One of the first steps in obtaining the utmost performance, service, and flying enjoyment from your Cessna is to familiarize yourself with your airplane's equipment, systems, and controls. This can best be done by reviewing this equipment while sitting in the airplane. Those items whose function and operation are not obvious are covered herein.

ENGINE CONTROLS.

THROTTLE, MIXTURE AND PROPELLER CONTROLS.

The throttle is the push-pull type. A knurled friction-type locknut is incorporated on the throttle to secure it in any desired setting. Clockwise rotation of the locknut increases friction to prevent creeping.

The push-pull mixture control incorporates a lock button to prevent inadvertent leaning or shutting off the fuel supply. To operate the control, depress the lock button, then push the knob in for rich mixture or pull it out for lean mixture. Pulling the knob all the way out is idle cutoff for stopping the engine. Release pressure on the lock button to lock the control. To make minor adjustments simply screw the control in or out without pressing the button.

The propeller control is the push-pull type and changes the setting of the propeller governor to regulate

engine speed. It is identical, in operation, to the mixture control. Pushing the knob forward increases RPM; pulling the knob out decreases RPM.

For all ground operations, and for take-off, the propeller control should be full in (high RPM). After take-off, reduce throttle first, then reduce RPM. Since a small control movement will produce a considerable RPM change, you should set up climb and cruise RPM by screwing the knob in or out.

Propeller surging (RPM variation up and down several times before engine smooths out and becomes steady) can be prevented by smooth throttle and propeller control knob operation. Do not change the throttle and propeller control settings with jerky and rapid motions.

INDUCTION HOT AIR KNOB.

The induction hot air knob is used to select either filtered cold air from
