Stark, 2007-11-13 The Metropolitan Police Service MPS now in its 175th year has a long tradition of working with doctors In fact the origin of the forensic physician police surgeon as we know him or her today dates from the passing by Parliament of The Metropolitan Act which received Royal Assent in June of 1829 Since then there are records of doctors being appointed to the police to provide medical care to detainees and examine police officers while on duty The MPS has been involved in the training of doctors for more than 20 years and has been at the forefront of setting the highest standards of working practices in the area of clinical forensic medicine Only through an awareness of the complex issues regarding the medical care of detainees in custody and the management of complainants of assault can justice be achieved The MPS therefore has worked in partnership with the medical profession to ensure that this can be achieved The field of clinical forensic medicine has developed in recent years into a specialty in its own right The importance of properly trained doctors working with the police in this area cannot be overemphasized It is essential for the protection of detainees in police custody and for the benefit of the criminal justice system as a whole A book that assists doctors in the field is to be applauded **Forensic Medicine of the Lower Extremity** Jeremy Rich, Dorothy E. Dean, Robert H. Powers, 2007-10-28 Publius Syrus stated back in 42 B C You cannot put the same shoe on every foot Maxim 596 Though written long before the advent of forensic science Syrus maxim summarizes the theme of Forensic Medicine of the Lower Extremity Human Identification and Trauma Analysis of the Thigh Leg and Foot Put simply the lower extremity is a tremendously variable anatomic region This variation is beneficial to forensic experts Differences in the leg and foot can be used to establish individual identity Analysis of damage to the lower limb can be used

to reconstruct antemortem perimortem and postmortem trauma As a forensic anthropologist I analyze cases involving decomposed burned m mified mutilated and skeletal remains Many of the corpses I examine are incomplete Occasionally I receive nothing but the legs and feet a lower torso dragged from a river a foot recovered in a city park dismembered drug dealers in plastic bags victims of bombings and airline disasters and the dead commingled in common graves Though the leg and foot contain much that is useful in forensic analysis before this publication investigators faced a twofold problem Little research that focused on the lower extremity was available in the literature and the existing research was published in diverse sources making its location and synthesis a daunting task

Forensic Pathology of Trauma Michael J. Shkrum, David A. Ramsay, 2007-11-06 The practice of forensic pathology includes the collection and analysis of evidence in relation to a corpse in order to establish the cause of death Knowledge of the cause of death contributes to the determination of the manner of death by medical examiners and coroners who are occasionally assisted by law enforcement officers In the process of establishing the cause and manner of death representatives of various investigative bodies have several responsibilities including explaining the death to family members attempting to reduce the risk of similar deaths in the future and if applicable apprehending the individuals who are responsible for the death The most well known and popular role of a forensic pathologist is in the investigation of cases of suspicious death however most medicolegal autopsies involve unexpected deaths that are above suspicion many of which are caused by trauma trauma being defined as any physical force or agent that causes bodily harm The purpose of Forensic Pathology of Trauma Common Problems for the Pathologist is to provide practical advice and information about the conduct of the forensic autopsy in cases of trauma and to offer guidance about the analysis of the autopsy findings in these cases
