Handbook of Research on Seismic Assessment and Rehabilitation of Historic Structures Asteris, Panagiotis G., Plevris, Vagelis, 2015-07-13 Rehabilitation of heritage monuments provides sustainable development and cultural significance to a region The most sensitive aspect of the refurbishment of existing buildings lies in the renovation and recovery of structural integrity and public safety The Handbook of Research on Seismic Assessment and Rehabilitation of Historic Structures evaluates developing contributions in the field of earthquake engineering with regards to the analysis and treatment of structural damage inflicted by seismic activity This book is a vital reference source for professionals researchers students and engineers active in the field of earthquake engineering who are interested in the emergent developments and research available in the preservation and rehabilitation of heritage buildings following seismic activity **Parametric Study of Ordinary Standard Bridges Using OpenSees and CSiBridge** Jinchi Lu, Ahmed-Waeil Metwalli Elgamal, Kevin Rory Mackie, 2015 **Protection of Built Environment Against Earthquakes** Matjaž Dolšek, 2011-08-16 Current knowledge and state of the art developments in topics related to the seismic performance and risk assessment of different types of structures and building stock are addressed in the book with emphasis on probabilistic methods The first part addresses the global risk components as well as seismic hazard and ground motions whereas the second more extensive part presents recent advances in methods and tools for the seismic performance and risk assessment of structures The book contains examples of steel masonry and reinforced concrete buildings as well as some examples related to various types of infrastructure such as bridges and concrete gravity dams The book's aim is to make a contribution towards the mitigation of seismic risk by presenting advanced methods and tools which can be used to achieve well informed decision making this being the key element for the future protection of the built environment against earthquakes Audience This book will be of interest to researchers postgraduate students and practicing engineers working in the fields of natural hazards earthquake structural and geotechnical engineering and computational mechanics but it may also be attractive to other experts working in the fields related to social and economic impact of earthquakes *Seismic Resistant Structures* S. Ivorra, C. A. Brebbia, 2018-03-28 Research studies on the preparation for and mitigation of future earthquakes an area of increasing importance to many countries around the world comprise this volume The selected papers included in this book have been prepared by experts from around the world in the fields of earthquake engineering relevant to the design of structures As the world's population has concentrated in urban areas resulting in buildings in regions of high seismic vulnerability we have seen the consequences of natural disasters take an ever higher toll on human existence Protecting the built environment in earthquake prone regions involves not only the optimal design and construction of new facilities but also the upgrading and rehabilitation of existing structures including heritage buildings which is an important area of research Major earthquakes and associated effects such as tsunamis continue to stress the need to carry out more research and a better understanding of

these phenomena is required to design earthquake resistant buildings and to carry out risk assessment and vulnerability studies
