

CPHEEO Manual on Sewerage and Sewage Treatment

----Observations on Septic Tank Systems (Section 9.1.2)

- A septic tank system is a typical on-site treatment facility that consists of a septic tank and a soak pit and employs two technologies- the first is anaerobic treatment in the septic tank and the second is the method of letting treated sewage penetrate the ground.
- It shows stable performance, provided that the water temperature is kept suitable to digestion and the soil has good permeability.
- When this system is applied to an urban area with high population density, care must be taken not to have a negative effect on the surrounding environment.
- However, the septic tank reduces BOD up to 50%, so due to partial treatment and associated health hazards the effluent can only be discharged into soak pits.
