Tavares,2022-09-26 This book includes selected papers from the International Conference on Next Generation of Internet of Things ICNGIoT 2022 organized by Department of Computer Science and Engineering School of Engineering GIET University Gunupur Odisha India during February 3 4 2022 The book covers topics such as IoT network design and architecture IoT network virtualization IoT sensors privacy and security for IoT SMART environment social networks data science and data analytics cognitive intelligence and augmented intelligence and case studies and applications Proceedings of the 21st International Symposium on High Voltage Engineering Bálint Németh,2019-11-27 High voltage engineering is extremely important for the reliable design safe manufacture and operation of electric devices equipment and electric power systems The 21st International Symposium on High Voltage Engineering organized by the 90 years old Budapest School of High Voltage Engineering provides an excellent forum to present results advances and discussions among engineers researchers and scientists and share ideas knowledge and expertise on high voltage engineering The proceedings of the conference presents the state of the art technology of the field The content is simultaneously aiming to help practicing engineers to be able to implement based on the papers and researchers to link and further develop ideas *Proceedings of the National Conference on Emerging Trends in Vacuum Electronic Devices and Applications* S. K. Ghosh,Anirban Bera,Ayan Kumar Bandyopadhyay,2025-04-30 This book presents peer reviewed articles from the Conference on Vacuum Electronic Devices Applications VEDA2024 held at Pilani in India Like its previous editions it focusses on new ideas and the latest developments in research and industry on topics like technologies for vacuum electron devices VEDs or Systems and Subsystems employing VEDs RF HPM and THz Components Devices Systems RF MW mm wave Antennas and EM Simulations Materials power systems and components for VEDs High emission density cathodes for VEDs Applications of VEDs Future trends competing technologies It brings together scientists industrialists academicians and research scholars to exchange ideas and present latest developments in the field **Solving Computationally Expensive Engineering Problems** Slawomir Koziel,Leifur Leifsson,Xin-She Yang,2014-10-01 Computational complexity is a serious bottleneck for the design process in virtually any engineering area While migration from prototyping and experimental based design validation to verification using computer simulation models is inevitable and has a number of advantages high computational costs of accurate high fidelity

simulations can be a major issue that slows down the development of computer aided design methodologies particularly those exploiting automated design improvement procedures e g numerical optimization The continuous increase of available computational resources does not always translate into shortening of the design cycle because of the growing demand for higher accuracy and necessity to simulate larger and more complex systems Accurate simulation of a single design of a given system may be as long as several hours days or even weeks which often makes design automation using conventional methods impractical or even prohibitive Additional problems include numerical noise often present in the simulation data possible presence of multiple locally optimum designs as well as multiple conflicting objectives In this edited book various techniques that can alleviate solving computationally expensive engineering design problems are presented One of the most promising approaches is the use of fast replacement models so called surrogates that reliably represent the expensive simulation based model of the system device of interest but they are much cheaper and analytically tractable Here a group of international experts summarize recent developments in the area and demonstrate applications in various disciplines of engineering and science The main purpose of the work is to provide the basic concepts and formulations of the surrogate based modeling and optimization paradigm as well as discuss relevant modeling techniques optimization algorithms and design procedures Therefore this book should be useful to researchers and engineers from any discipline where computationally heavy simulations are used on daily basis in the design process

Electron Gun for Gyrotrons Udaybir Singh,A. K. Sinha,2022-08-22 This book highlights the emission transmission and launching of an electron beam It presents an overview and recent advances in order to enhance knowledge in the field of gyrotron in general and electron gun in particular The book is presented in seven chapters starting with the introduction and ending with future possible directions in the field of electron beams and gyrotrons

Co-simulations of Microwave Circuits and High-Frequency Electromagnetic Fields Mei Song Tong,Xiao Yu Li,2024-07-03 This book aims to provide many advanced application topics for microwave circuits and high frequency electromagnetic EM fields by using advanced design system ADS and high frequency structure simulator HFSS as simulation platforms In particular it contains the latest multidisciplinary co simulation guidance on the design of relevant components and devices Currently the circuit field design and performance analysis and optimization strongly rely on various kinds of robust electronic design automation EDA software RF microwave engineers must grasp two or more types of related simulation design software ADS by Keysight and HFSS by Ansys are the representative for circuit simulations and for field and structural simulations of microwave devices respectively At present these two types of software are widely used in enterprises universities and research institutions The main purpose of this book is to enable readers who are interested in microwave engineering and applied electromagnetics to master the applications of these two tools It also helps readers expand their knowledge boundaries behind those types of software and deepen their understanding of developing interdisciplinary technologies by co simulations The book is divided into three parts The first part introduces the

two latest versions of ADS and HFSS and helps readers better understand the basic principles and latest functions better. It also advises how to choose appropriate simulation tools for different problems. The second part mainly describes co-simulations for high frequency EM fields, microwave circuits, antenna designs, EM compatibility, EMC, and thermal and structural analyses. It provides guides and advices on performing co-simulations by ADS and HFSS incorporated with other types of software respectively. The last part narrates the automation interfaces and script programming methods for co-simulations. It primarily deals with the Advanced Extension Language (AEL), Python Data Link (PDL), and MATLAB interface in ADS. For HFSS, it discusses VBScript, IronPython scripting, and Application Programming Interface (APIs) based on MATLAB. Each topic contains practical examples to help readers understand so that they can gain a solid knowledge and skills regarding automated interfaces and scripting methods based on these kinds of software. Concisely written in combination with practical examples, this book is very suitable as a textbook in introductory courses on microwave circuit and EM simulations and also as a supplementary textbook in many courses on electronics, microwave engineering, communication engineering, and related fields. As well, it can serve as a reference book for microwave engineers and researchers.
