Differential Neural Networks For Robust Nonlinear Control:

Differential Neural Networks For Robust Nonlinear Control: Identification, State Estimation And Trajectory Tracking Alex Poznyak, Edgar N Sanchez, Wen Yu, 2001-09-28 This book deals with continuous time dynamic neural networks theory applied to the solution of basic problems in robust control theory including identification state space estimation based on neuro observers and trajectory tracking The plants to be identified and controlled are assumed to be a priori unknown but belonging to a given class containing internal unmodelled dynamics and external perturbations as well The error stability analysis and the corresponding error bounds for different problems are presented The effectiveness of the suggested approach is illustrated by its application to various controlled physical systems robotic chaotic chemical etc *Applied Artificial Higher Order Neural Networks for Control and Recognition* Zhang, Ming, 2016-05-05 In recent years Higher Order Neural Networks HONNs have been widely adopted by researchers for applications in control signal generating pattern recognition nonlinear recognition classification and prediction of control and recognition scenarios Due to the fact that HONNs have been proven to be faster more accurate and easier to explain than traditional neural networks their applications are limitless *Applied Artificial Higher Order Neural Networks for Control and Recognition* explores the ways in which higher order neural networks are being integrated specifically for intelligent technology applications Emphasizing emerging research practice and real world implementation this timely reference publication is an essential reference source for researchers IT professionals and graduate level computer science and engineering students Artificial Higher Order Neural Networks for Computer Science and Engineering: Trends for Emerging Applications Zhang, Ming, 2010-02-28 This book introduces and explains Higher Order Neural Networks HONNs to people working in the fields of computer science and computer engineering and how to use HONNs in these areas Provided by publisher **Modeling and Control of Complex Systems** Petros A. Ioannou, Andreas Pitsillides, 2007-12-26 There is an emerging interest in the area of modeling and control of complex systems for applications in many engineering and non engineering fields such as biology transportation robotics information technology and communications This text provides a pioneering single source compilation of material from internationally renowned experts with different approaches to the applications of modeling and control of complex systems Sections cover complex systems biological systems communication networks sensor networks and automation autonomous vehicles and robotics transportation systems and structures and others The authors highlight the most important areas of research the latest advances and possible future directions **Discrete-Time High Order Neural Control** Edgar N. Sanchez, Alma Y. Alanís, Alexander G. Loukianov, 2008-06-24 Neural networks have become a well established methodology as exemplified by their applications to identification and control of general nonlinear and complex systems the use of high order neural networks for modeling and learning has recently increased Using neural networks control algorithms can be developed to be robust to uncertainties and modeling errors The most used NN structures are Feedf

ward networks and Recurrent networks The latter type offers a better suited tool to model and control of nonlinear systems There exist different training algorithms for neural networks which however normally encounter some technical problems such as local minima slow learning and high sensitivity to initial conditions among others As a viable alternative new training algorithms for example those based on Kalman filtering have been proposed There already exists publications about trajectory tracking using neural networks however most of those works were developed for continuous time systems On the other hand while extensive literature is available for linear discrete time control system nonlinear discrete time control design techniques have not been discussed to the same degree Besides discrete time neural networks are better fitted for real time implementations
