

# AP Biology Ch 13 KEY: *The Molecular Basis of Inheritance*

## Key Concepts:

1. **DNA** is the genetic material.
2. Many **Proteins** work together in DNA **Replication** and repair.
3. A **Chromosome** consists of a **DNA Molecule** packed together with **Proteins (histones)**.
4. Understanding DNA structure and replication makes **Genetic Engineering** possible.

## CH 13:

5. **Nucleic Acids** are unique molecules due to their ability to **direct their own replication**.
6. In this chapter you will learn:
  - o How scientists deduced that **DNA was the genetic material**
  - o How DNA is **replicated** (copied)
  - o How cells **repair** DNA
  - o How DNA is **packed** w/ **proteins** to form a chromosome.
7. The Morgan et al. group showed that **Genes** exist as parts of chromosomes. After that, the two components of chromosomes that became candidates as "the" genetic material were **DNA** and **Proteins**. Understandably, proteins were the frontrunners as they were identified as a class of macromolecules with great **heterogeneity** and **specificity** (essential characteristics for hereditary material). Nucleic acids seemed too uniform... but, this was incorrect.
8. The view of Protein's role gradually changed as the role of **DNA** in heredity was worked out in studies of **Bacteria** and the **Viruses (bacteriophages)** that infect them.
9. Concept 13.1: Discuss the experiments of the following scientists and how their experiments gave evidence to DNA as the genetic material.

| Scientist                                                                                                        | Year | Experiment (description)                                                                                                                                                                                                                    | Evidence gained                                                                                                                                                                                                                                                                                      |
