Complete the following questions as you read the sixth chapter content—Energy Flow and Chemical Cycling in the Biosphere.

1. Define the process of photosynthesis.

The process in which plants, algae, and some bacteria transform light energy to chemical energy stored in the bonds of sugar.

2. Assuming you wrote the definition word for word from the textbook, now rewrite the definition using your own words.

The process by which plants, algae and bacteria go through, with the use of light energy, to produce energy for themselves and through the process providing oxygen to their surroundings.

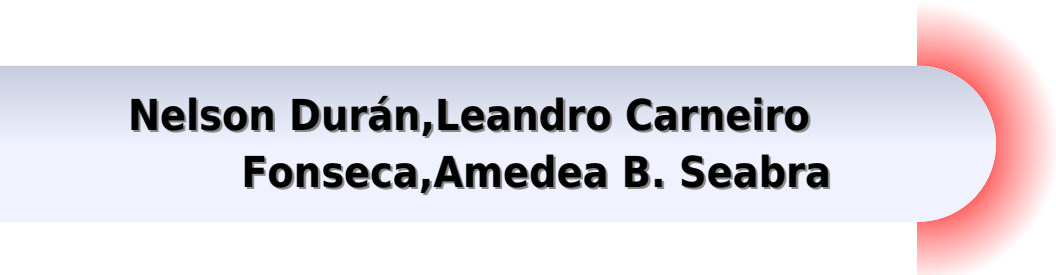

3. Complete the table that compares the roles of producers and consumers in an ecosystem.

	Producers	Consumers
Role(s) within an ecosystem	Autotrophs make their own food out of inorganic ingredients	Heterotrophs are organism that cannot make their own food, so they eat organic material for energy.
Example	Plants	Koalas, animals

4. Energy and chemicals move through ecosystems in different ways. Nutrients are constantly **recycled** through the ecosystem, while energy moves through an ecosystem in **one** direction.
