Security in Computing Systems Joachim Biskup, 2008-11-14 This monograph on Security in Computing Systems Challenges Approaches and Solutions aims at introducing surveying and assessing the fundamentals of security with respect to computing Here computing refers to all activities which individuals or groups directly or indirectly perform by means of computing systems i.e. by means of computers and networks of them built on telecommunication We all are such individuals whether enthusiastic or just bowed to the inevitable So as part of the information society we are challenged to maintain our values to pursue our goals and to enforce our interests by consciously designing a global information infrastructure on a large scale as well as by appropriately configuring our personal computers on a small scale As a result we hope to achieve secure computing Roughly speaking computer assisted activities of individuals and computer mediated cooperation between individuals should happen as required by each party involved and nothing else which might be harmful to any party should occur The notion of security circumscribes many aspects ranging from human qualities to technical enforcement First of all in considering the explicit security requirements of users administrators and other persons concerned we hope that usually all persons will follow the stated rules but we also have to face the possibility that some persons might deviate from the wanted behavior whether accidentally or maliciously

Data Engineering with Google Cloud Platform Adi Wijaya, 2024-04-30 Become a successful data engineer by building and deploying your own data pipelines on Google Cloud including making key architectural decisions Key Features Get up to speed with data governance on Google Cloud Learn how to use various Google Cloud products like Dataform DLP Dataplex Dataproc Serverless and Datastream Boost your confidence by getting Google Cloud data engineering certification guidance from real exam experiences Purchase of the print or Kindle book includes a free PDF eBook Book Description The second edition of Data Engineering with Google Cloud builds upon the success of the first edition by offering enhanced clarity and depth to data professionals navigating the intricate landscape of data engineering Beyond its foundational lessons this new edition delves into the essential realm of data governance within Google Cloud providing you with invaluable insights into managing and optimizing data resources effectively Written by a Data Strategic Cloud Engineer at Google this book helps you stay ahead of the curve by guiding you through the latest technological advancements in the Google Cloud ecosystem You'll cover essential aspects from exploring Cloud Composer 2 to the evolution of Airflow 2.5 Additionally you'll explore how to work with cutting edge tools like Dataform DLP Dataplex

Dataprocs Serverless and Datastream to perform data governance on datasets By the end of this book you will be equipped to navigate the ever evolving world of data engineering on Google Cloud from foundational principles to cutting edge practices What you will learn Load data into BigQuery and materialize its output Focus on data pipeline orchestration using Cloud Composer Formulate Airflow jobs to orchestrate and automate a data warehouse Establish a Hadoop data lake generate ephemeral clusters and execute jobs on the Dataprocs cluster Harness Pub Sub for messaging and ingestion for event driven systems Apply Dataflow to conduct ETL on streaming data Implement data governance services on Google Cloud Who this book is for Data analysts IT practitioners software engineers or any data enthusiasts looking to have a successful data engineering career will find this book invaluable Additionally experienced data professionals who want to start using Google Cloud to build data platforms will get clear insights on how to navigate the path Whether you are a beginner who wants to explore the fundamentals or a seasoned professional seeking to learn the latest data engineering concepts this book is for you

Making data portability more effective for the digital economy Jan Krämer, Pierre Senellart, Alexandre de Streel, 2020-06-15 This study provides recommendations on how to make personal data portability more effective This will truly empower consumers to use the services they want and share their data with whoever they wish and stimulate innovation in Europe With the entry into force of the GDPR European citizens gained new rights notably with data portability But two years later there is still little sign of people exercising this right and of companies offering an easy and convenient service for data portability While the European Commission is finalising its evaluation of the GDPR and closes its consultation on the European data strategy the authors professors Jan Krämer Pierre Senellart and Alexandre de Streel warn that the current legal framework requires clarifications to better empower European citizens in a data driven society In this study they identify barriers to data portability including the lack of possibilities to import data as well as the lack of common standards and tools to access data as easy as the click of a button The ability to provide users with a centralised dashboard for monitoring and controlling the flow of their data is also critically missing Today consumers do not widely use data portability for reasons that can and should be overcome Making data portability more effective is better for competition for innovation and to empower users stress the authors There should be no second guessing on whether to make data portability more effective the time to act is now The current EU framework encourages data portability but there are legal gaps that the EU should fill The authors insist on the need for detailed guidance on how data portability can be facilitated and on which data is subject to data portability without violating privacy rights They advocate that data provided by users when using a service such as search history i.e. observed data should clearly be included under the scope of data portability The authors consider it essential that the obligation to offer standardised Application Programming Interfaces APIs be much more widespread to enable consumers to continuously port their data We

believe that standardised APIs that enable continuous data portability is a prerequisite for encouraging more organisations to import personal data and for encouraging more consumers to initiate such transfers explain the authors Projects such as the Data Transfer Project have highlighted that continuous data portability is technically feasible The authors argue that Personal Management Information Systems PIMs facilitate the complex consent management and offer users a centralised dashboard for monitoring and controlling the flow of their data will have a crucial role to play for the wider adoption of data portability It must be as easy as clicking a button for consumers to continuously share data they created with one provider to another provider This may also require educating and informing users on their rights through information campaigns alongside clear policy measures explain the authors Nevertheless they stress that PIMs are not likely to find a sustainable business model and thus policy makers should support the emergence of open source projects by setting common standards for data transfers consent management and identity management
