composites are now used in almost all areas of technology and have potential for even greater and more widespread applications To make this a reality it is increasingly necessary to understand the microstructure of the material and its relationship with properties and performance Central to this is the characterization of the material in particular using optical and scanning electron microscopy techniques This book acts as an expert guide to the various steps necessary for successful and accurate characterization of these materials including the crucially important preparation stage the techniques used to reveal the microstructure and the analysis of the results In particular the book presents fundamental information on preparing polished sections of ceramics and ceramic composites including the main steps of sampling sectioning mounting and impregnation and mechanical grinding lapping and polishing It discusses microstructural imaging in the optical microscope OM and the use of the scanning electron microscope SEM Etching or contrast enhancement following final polishing in order to reveal the material s microstructure is also covered An entire chapter is devoted to material specific preparation procedures for polished sections These procedures take into account the properties of the ceramic or composite being examined and the purpose of the examination They have proven to be very suitable for the respective materials and are effective for revealing the pores The examples presented here for ceramics and ceramic composites provide polished sections of good to excellent quality for routine examination under the optical microscope They include tips for etching and contrast enhancement as well as microstructural images Chapter 5 discusses the preparation of polished sections for purposes of examination and contains information on producing oblique sections and controlled removal of material It also addresses the production of thin sections As a complement to the examination of the microstructure chapter 6 provides insight into the evaluation of hardness testing indentations Chapter 7 concludes this work with an overview of the technical literature

Ceramic Microstructures Antoni P. Tomsia,Andreas M. Glaeser,2012-12-06 This volume titled Proceedings of the International Materials Symposium on Ceramic Microstructures Control at the Atomic Level summarizes the progress that has been achieved during the past decade in understanding and controlling microstructures in ceramics A particular emphasis of the symposium and therefore of this volume is advances in the characterization understanding and control of micro structures at the atomic or near atomic level This symposium is the fourth in a series of meetings held every ten years devoted to ceramic microstructures The inaugural meeting took place in 1966 and focussed on the analysis significance and production of microstructure the symposium emphasized the need for and importance of characterization in achieving a more complete understanding of the physical and chemical characteristics of ceramics A consensus emerged at that meeting on

the critical importance of characterization in achieving a more complete understanding of ceramic properties That point of view became widely accepted in the ensuing decade The second meeting took place in 1976 at a time of world wide energy shortages and thus emphasized energy related applications of ceramics and more specifically microstructure property relationships of those materials The third meeting held in 1986 was devoted to the role that interfaces played both during processing and in influencing the ultimate properties of single and polyphase ceramics and ceramic metal systems
