Hybrid (combined endovascular and microsurgical) treatments for cerebrovascular diseases ,2024-03-19 Most cerebrovascular diseases such as intracranial aneurysms IA arterio venous malformations AVM or dural fistulas AVF can effectively be treated with microsurgical techniques i e clipping or with endovascular procedures i e coiling In certain patients also gamma knife radiation treatment may play a role Sometimes the treatment strategy may consist of a staged approach that combines some of the above mentioned techniques

in a serial manner Likewise also spinal vascular pathologies i e spinal vascular malformations spinal dural AV fistulas or spinal cavernomas may often be approached with a single treatment modality or more rare with a staged approach In selected cases however simultaneous treatment combining open micro surgical and endovascular procedures in one single hybrid operation may be favorable So far only few series reported indications potential benefits or pitfalls with hybrid approaches in cerebrovascular surgery This collection aims to summarise reported experiences with hybrid approaches that combine simultaneous endovascular and microsurgical interventions in a setting of vascular diseases in the brain and in the spine It will put an emphasis on indication benefits and potential harms of combined diagnostic therapeutic procedures i e intraoperative control DSA after clipping advanced endovascular strategies enabled through surgical access i e direct arterial punctuation after previous surgical vessel exposure or combined therapeutic operations i e proximal control through balloon occlusion during clipping

Intracranial Aneurysms Andrew J. Ringer, 2018-05-21 Intracranial aneurysm result from complex interactions between cerebrovascular anatomy vascular injury and adaptive remodeling of the arterial wall and represent a cerebrovascular disorder with the potential for substantial morbidity and mortality Most intracranial aneurysms occur in the larger arteries near the skull base in or around the circle of Willis but variants may appear virtually anywhere in the cerebral vasculature The aneurysm can leak or rupture causing life threatening bleeding and is the most common cause of spontaneous subarachnoid hemorrhage the third most common form of stroke Intracranial aneurysms affect about 1 in 10 000 people per year in the United States approximately 27 000 Intracranial Aneurysms will address the natural history biology and basic management principles and treatment of aneurysms The chapters also explore the unique features of each type or location of aneurysm while considering the medical surgical and endovascular options Contributions are by members of the Endovascular Neurosurgery Research Group a group of recognized expert neurosurgeons who specialize in cerebrovascular and endovascular management of aneurysms Comprehensively covers the basic mechanisms history management and treatment of intracranial aneurysms Written for researchers residents and clinical practitioners in clinical neuroscience neurology and neurosurgery Contains contributions by expert neurosurgeons of the Endovascular Neurosurgery Research Group
