Keith Moss

Cibse Guide 1986 Section A9:

Building Energy Management Systems Geoff Levermore, 2013-07-04 Energy management systems are used to monitor building temperature inside and outside buildings and control the boilers and coolers Energy efficiency is a major cost issue for commerce and industry and of growing importance on university syllabuses Fully revised and updated this text considers new developments in the control of low energy and HVAC systems and contains two new chapters Written for practising engineers essential for control engineers and energy managers in addition to being essential reading for under postgraduate courses in building services and environmental engineering

Heating and Water Services Design in Buildings Keith J. Moss, 1996 Avoiding the need for a detailed knowledge of mathematical theory this book involves the reader in working through examples and case studies to come to a thorough understanding of the design of heating and water services in buildings

Energy Management and Operating Costs in Buildings Keith Moss, 2013-06-17 Managing the consumption and conservation of energy in buildings must now become the concern of both building managers and occupants The provision of lighting hot water supply communications cooking space heating and cooling accounts for 45 per cent of UK energy consumption Energy Management and Operating Costs in Buildings introduces the reader to the principles of managing and conserving energy consumption in buildings people use for work or leisure Energy consumption is considered for the provision of space heating hot water supply ventilation and air conditioning The author introduces the use of standard performance indicators and energy consumption yardsticks and discusses the use and application of degree days

Air Conditioning Application and Design W.P. Jones, 2012-11-12 Intended for advanced students of building services this practical book describes the design of air conditioning systems Readers are assumed to have a knowledge of the basic principles of air conditioning which are covered in the companion volume Air Conditioning Engineering This new edition takes account of the latest building codes and pays greater attention to energy conservation The section on systems characteristics is expanded and extensively revised to take account of developments in the technology of air conditioning since publication of the previous edition There are expanded sections on specialist applications such as systems for clean rooms in the semiconductor industry The author has wide experience both in lecturing on the subject and in the practical design and installation of air conditioning systems

Air Conditioning Engineering W Peter Jones, 2007-08-31 Designed for students and professional engineers the fifth edition of this classic text deals with fundamental science and design principles of air conditioning engineering systems W P Jones is an acknowledged expert in the field and he uses his experience as a lecturer to present the material in a logical and accessible manner always introducing new techniques with the use of worked examples

Energy: Management, Supply and Conservation Clive Beggs, 2012-06-25 With more and more concern being expressed over the Earth's dwindling energy resources as well as rising pollution levels the subject of energy management and conservation is becoming increasingly important Over half of all energy consumed is used in buildings so

effective management of buildings whether commercial or domestic is vital This book is a comprehensive text dealing with the theory and practice of the supply of energy to consumers energy management and auditing and energy saving technology It will be a core text on courses on energy management and building services as well as updating professionals in the building sector

Electrical Engineer's Reference Book G R Jones, 2013-10-22 A long established reference book radical revision for the fifteenth edition includes complete rearrangement to take in chapters on new topics and regroup the subjects covered for easy access to information The Electrical Engineer's Reference Book first published in 1945 maintains its original aims to reflect the state of the art in electrical science and technology and cater for the needs of practising engineers Most chapters have been revised and many augmented so as to deal properly with both fundamental developments and new technology and applications that have come to the fore since the fourteenth edition was published 1985 Topics covered by new chapters or radically updated sections include digital and programmable electronic systems reliability analysis EMC power electronics fundamental properties of materials optical fibres maintenance in power systems electroheat and welding agriculture and horticulture aeronautic transportation health and safety procurement and purchasing engineering economics

Newnes Building Services Pocket Book John Knight, W.P. Jones, 2012-05-31 Newnes Building Services Pocket Book is a unique compendium of essential data techniques and procedures best practice and underpinning knowledge This makes it an essential tool for engineers involved in the design and day to day running of mechanical services in buildings and a valuable reference for managers students and engineers in related fields This pocket reference gives the reader access to the knowledge and knowhow of the team of professional engineers who wrote the sixteen chapters that cover all aspects of mechanical building services Topic coverage includes heating systems ventilation air conditioning refrigeration fans ductwork pipework and plumbing drainage and fire protection The result is a comprehensive guide covering the selection of HVAC systems and the design process from initial drafts through to implementation The second edition builds on the success of this popular guide with references to UK and EU legislation fully updated throughout and coverage fully in line with the latest CIBSE guides

Building Heat Transfer Morris Grenfell Davies, 2004-06-25 A third or more of the energy consumption of industrialized countries is expended on creating acceptable thermal and lighting conditions in buildings As a result building heat transfer is keenly important to the design of buildings and the resulting analytical theory forms the basis of most design procedures Analytical Theory of Building Heat Transfer is the first comprehensive reference of its kind a one volume compilation of current findings on heat transfer relating to the thermal behavior of buildings forming a logical basis for current design procedures

Building Services Engineering Spreadsheets David Chadderton, 2002-09-11 Building Services Engineering Spreadsheets is a versatile user friendly tool for design calculations Spreadsheet application software is readily understandable since each formula is readable in the location where it is used Each step in the development of these engineering solutions is fully explained The book provides study material in building services engineering and will be

valuable both to the student and to the practising engineer. It deals with spreadsheet use, thermal transmittance, building heat loss and heat gain, combustion analysis, fan selection, air duct design, water pipe sizing, lumen lighting design, electrical cable sizing at a suitable level for practical design work. Commercially available software, while very powerful and comprehensive, does not allow the user any facility to look into the coded instructions. The user has to rely upon the supplier for explanation, updates and corrections. The advantage that the spreadsheet applications provided with the book have over purchased dedicated software is that the user can inspect everything that the program undertakes. Parts of the worksheets can be copied to other cells in order to expand the size of each worksheet. Experienced spreadsheet operators can edit the cells to change the way in which data and calculations are used and, with guidance from the explanatory build, their own applications.
