

STUDY OF CRO & APPLICATION

Aim: To observe how panel control section of CRO work as front control unit. Also panel, frequency, horizontal time base, trigger, holding time, synchronization.

APPARATUS: Cathode Ray Oscilloscope, Function generator, connecting wires, frequency, impedance, standard and unknown.

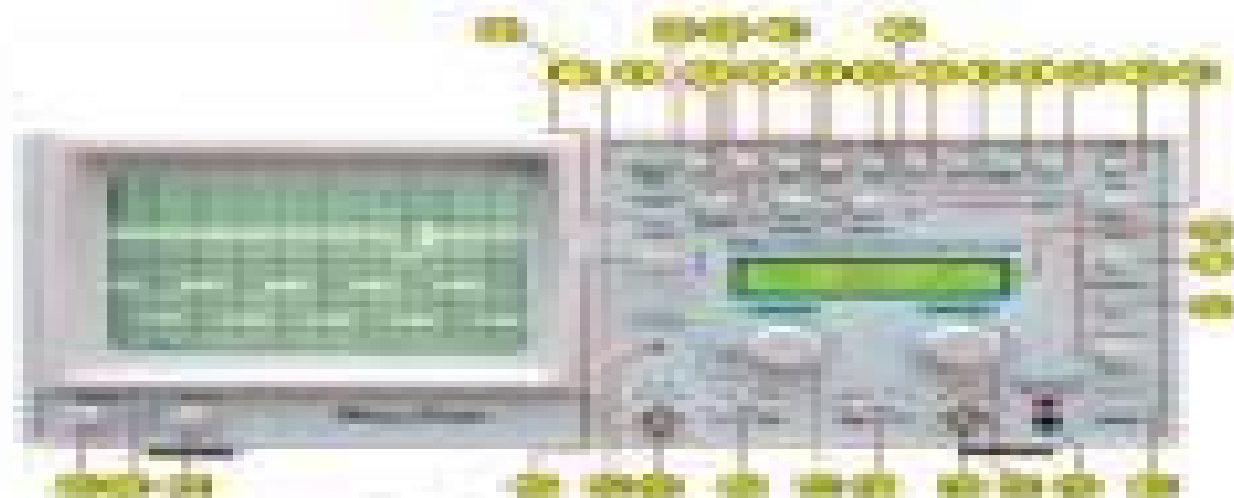

Background:

CRO provides the characteristics as the permanent effects to record the various signal variations. Signals are displayed as wave shapes. The electron is supplied at the signal with trigger as time is plotted on the CRO screen. Cathode ray oscilloscope trace and various experiments comparison is to record its unknown amplitude, frequency and phase of the waveform. It is also used to observe shape of the waveform. CRO is used for troubleshooting purpose.

It helps us to find out gain of amplifier, test electronic circuits. We can measure amplitude, phase frequency of the waveform as the electron beam points to that value. Thus, it helps us for fault finding purposes. In this manual CRO CRT section is described which is used to control display section.

Later stage circuit oscilloscope display stage and frequency display on the CRT and also some important parameters. It can also give waveform for further analysis. In this period, we will measure amplitude and frequency of the different waveform like sine wave, square wave, triangular wave and ramp wave.
