Clinical Research From Proposal To Implementation:

Clinical Research Michael J. McPhaul, Robert D. Toto, 2011 Clinical and translational research is a crucial link to the improvement of clinical care and practice. Many of the elements that are involved physicians, nurses, pharmacists, laboratory testing, medical records are also involved in the delivery of care to patients. Yet in the conduct of clinical research, these elements are arrayed in different configurations and constrained by rules and regulations that are distinct from those that guide the practice of medicine. In parallel with these considerations, the conduct of clinical research demands a specific skill set. Specialized tools are required to formulate and design informative clinical trials and to interpret the findings from such experiments. Provided by publisher

Dissemination and Implementation Research in Health Ross C. Brownson, 2018 The definitive work in D I research, now completely updated and expanded. The application of scientific research to the creation of evidence-based policies is a science unto itself and one that is never easy. Dissemination and implementation research D I is the study of how scientific advances can be implemented into everyday life and understanding how it works has never been more important for students and professionals across the scientific, academic, and governmental communities. Dissemination and Implementation Research in Health is a practical guide to making research more consequential. A collection assembled and written by today's leading D I researchers. Readers of this book are taught to Evaluate the evidence base in an effective intervention. Choose a strategy that produces the greatest impact. Design an appropriate and effectual study. Track essential outcomes. Account for the barriers to uptake in communities, social service agencies, and health care facilities. The challenges to moving research into practice are universal and they're complicated by the current landscape's reliance on partnerships and multi-center research. In this light, Dissemination and Implementation Research in Health is nothing less than a roadmap to effecting change in the sciences. It will have broad utility to researchers and practitioners in epidemiology, biostatistics, behavioral science, economics, medicine, social work, psychology, and anthropology, both today and in our slightly better future.
