Ceb Fip Model Code 1990 Design Code:

CEB-FIP Model Code 1990 FIB - International Federation for Structural Concrete, 1993-01-01 This design code for concrete structures is the result of a complete revision to the former Model Code 1978 which was produced jointly by CEB and FIP. The 1978 Model Code has had a considerable impact on the national design codes in many countries. In particular, it has been used extensively for the harmonisation of national design codes and as basic reference for Eurocode 2. The 1990 Model Code provides comprehensive guidance to the scientific and technical developments that have occurred over the past decade in the safety analysis and design of concrete structures. It has already influenced the codification work that is being carried out both nationally and internationally and will continue so to do. CEB/FIP Model Code 1990 Comité

International Federation for Structural Concrete, 1995-06-01 The first part of the report is devoted to linear elements: beams, columns and includes chapters on shear and flexure in beams, ultimate limit state design of prestressed beams and of reinforced concrete members under combination of bending with axial load and shear of beams subjected to torsion and a chapter on shear design based on truss models with crack friction. The second part treats two dimensional elements and includes background information on ULS design of wall, shell and slab elements. It concludes with a chapter on axisymmetric punching of slabs. *Proceedings fib Symposium in Prague Czech Republic Vol1* FIB - International Federation for

This bulletin contains 18 papers that were presented in three sessions as part of an international symposium held in Philadelphia Pa USA on October 25 2016. The symposium was co organized by the punching shear sub committee of ACI 445 and by fib Working Party 2.2.3 Punching and Shear in Slabs with the objectives of not only disseminating information on this important design subject but also promoting harmonization among the various design

theories and treatment of key aspects of punching shear design The papers are organized in the same order they were presented in the symposium The symposium honored Professor Emeritus Neil M Hawkins University of Illinois at Urbana Champaign USA whose contributions through the years in the field of punching shear of structural concrete slabs have been paramount The papers cover key aspects related to punching shear of structural concrete slabs under different loading conditions the study of size effect on punching capacity of slabs the effect of slab reinforcement ratio on the response and failure mode of slabs without and with shear reinforcement and its implications for the design and formulation in codes of practice an examination of different analytical tools to predict the punching shear response of slabs the study of the post punching response of concrete slabs the evaluation of design provisions in modern codes based on recent experimental evidence and new punching shear theories and an overview of the combined efforts undertaken jointly by ACI 445 and fib WP 2.2.3 to generate test result databanks for the evaluation and calibration of punching shear design recommendations in North American and international codes of practice
