DIRKSEN, 1978 **Collected Works of Shinya Inou** Shinya Inou, 2008 This book collects the publications of Shinya Inou pioneering cell biophysicist and winner of the 2003 International Prize for Biology The articles cover the discovery and elucidate the behavior in living cells of the dynamic molecular filaments which organize the cell and play a central role in cell division Other articles report on the development of microscopes especially those using polarized light and digital image enhancement which make possible studies of the ever changing molecular architecture directly in living cells This book also contains many high quality photo micrographs as well as an appended DVD with an extensive collection of video movies of active living cells After training in Tokyo and at Princeton University Dr Inou has held teaching positions at the University of Washington Tokyo Metropolitan University University of Rochester Dartmouth Medical School and University of Pennsylvania He is a member of the U S National Academy of Sciences and currently holds the title of Distinguished Scientist at the Marine Biological Laboratory in Woods Hole Massachusetts

Echinoderm Gametes and Embryos, 1986-04-04 *Echinoderm Gametes and Embryos* **Muscle Contraction and Cell Motility** H. Sugi, 2012-12-06 This volume intends to provide a comprehensive overview on the mechanisms of muscle contraction and non muscle cell motility at the molecular and cellular level not only for investigators in these fields but also for general readers interested in these topics A most attractive feature of various living organisms in the animal and plant kingdoms is their ability to move In spite of a great diversity in the structure and function of various motile systems it has frequently been assumed since the nineteenth century that all kinds of motility are essentially the same Based on this assumption some investigators in the nineteenth century thought that the mechanisms of motility could better be studied on primitive non muscle motile systems such as amoeboid movement rather than on highly specialized muscle cells Contrary to their expectation however the basic mechanisms of motility have been revealed solely by investigations on vertebrate skeletal muscles since a monumental discovery of Szent Gyorgyi and his coworkers in the early 1940s that muscle contraction results from the interaction between

two different contractile proteins actin and myosin coupled with ATP hydrolysis **Current Catalog** National Library of Medicine (U.S.),1979 First multi year cumulation covers six years 1965 70 **Mitosis/Cytokinesis** Arthur Zimmerman,2012-12-02 Mitosis Cytokinesis provides a comprehensive discussion of the various aspects of mitosis and cytokinesis as studied from different points of view by various authors The book summarizes work at different levels of organization including phenomenological molecular genetic and structural levels The book is divided into three sections that cover the premeiotic and premitotic events mitotic mechanisms and approaches to the study of mitosis and mechanisms of cytokinesis The authors used a uniform style in presenting the concepts by including an overview of the field a main theme and a conclusion so that a broad range of biologists could understand the concepts This volume also explores the potential developments in the study of mitosis and cytokinesis providing a background and perspective into research on mitosis and cytokinesis that will be invaluable to scientists and advanced students in cell biology The book is an excellent reference for students lecturers and research professionals in cell biology molecular biology developmental biology genetics biochemistry and physiology **The Cell Biology of Fertilization** Heide Schatten,2012-12-02 The Cell Biology of Fertilization provides an introduction to the various aspects of fertilization in several species including nematodes insects ascidians clams sea urchins rats hamsters cows pigs sheep and humans This text discusses the experimental approaches using methods of biophysics biochemistry enzymology immunology cell biology and molecular biology This book is comprised of three parts encompassing 15 chapters Part I explores the ability of egg factors to affect sperm motility and initiate the acrosome reaction by modifying ion movements across the sperm plasma membrane Part II considers the aspects of egg architecture ranging from extracellular remodelling to nuclei organization which is involved in embryogenesis and fertilization Part III provides an overview of gene expression oncogenes and nuclear determination during embryogenesis and at fertilization Cell biologists developmental biologists molecular biologists geneticists biophysicists biochemists reproductive biologists scientists researchers and students will find this book extremely useful
