Effective and Equitable Teacher Practice in Mathematics and Science Education Nani Teig, Trude Nilsen, Kajsa Yang Hansen, 2024-03-19 This open access book presents original research on effective and equitable teacher practice in mathematics and science education across Nordic countries It focuses on three key aspects of teacher practice what teachers teach how teachers teach and how teachers assess their students To provide a comprehensive understanding of teacher practice data from the IEA's Trends in Mathematics and Science Study TIMSS from 2011 to 2019 was analyzed TIMSS provides large scale and representative data allowing an in depth investigation of the relations between teachers their practices and student outcomes The findings highlight the changes in teacher practice over time and the extent to which such changes explain the differences in student outcomes This research also contributes to understanding how the relationships between teacher practice and student

outcomes vary across different student groups i.e. gender socioeconomic status and language background. The empirical evidence presented not only adds a significant layer to the academic discourse but also offers practical implications. These insights are crucial in facilitating educational policymaking and classroom practices aimed at improving student outcomes and closing gaps in educational inequality.

Perspectives on Multigrade Teaching Linley Cornish, Matshidiso Joyce Taole, 2021-10-25. This book contains the results of research projects carried out in relation to multigrade teaching in Australia and South Africa. Research in multigrade contexts is not commonly reported and rarely in book form. The research results have implications for multigrade teachers, government education personnel and university teacher educators. The book also contains chapters with practical advice for multigrade teachers including examples of multigrade teaching used in an Australian seven grade class, kindergarten to grade 6. Other chapters contain suggestions for practical strategies a multigrade teacher can use to reduce the workload involved in planning for multiple grades. Very little is published in the area of multigrade teaching yet the number of multigrade schools worldwide is huge. Developed countries still have a significant proportion of multigrade schools, commonly one fifth to one third of all primary schools or classes. Despite decades of centralisation of schools and expansion of transport networks, the number of these schools remains high, mostly in rural areas. Developing countries established multigrade schools in rural areas in order to achieve the UN Millennium Development Goal of Universal Primary Education. Yet specific training to teach a multigrade class remains virtually non-existent in initial teacher education programs worldwide. The value of this book is thus to report specific research carried out in multigrade contexts but also to provide practical help for multigrade teachers. This help is needed as the teachers strive to achieve the UN Sustainable Development Goal of a quality education through helping their students develop the skills and behaviours required for 21st century learning.

Activating Assessment for All Students Mary Hamm, Dennis Adams, 2009-10-15. Hamm and Adams present models to help teachers identify student learning problems, recognizing when to re-teach, when to move ahead and when to explain or give more examples. *Activating Assessment for All Students* takes all of these into account when it provides differentiated science/math methods and goes on to suggest ways that formative assessment practices can inform differentiated teaching/learning and assessment. These methods promote success for more students by helping teachers develop informative assessment for lessons and related tools for reaching the varying levels of student competencies within their classes. This book builds on the expanding knowledge of what works in classrooms and suggests approaches that can open up individual and group possibilities for science and mathematics instruction. It intends to help you answer the following questions: What is differentiated instructional assessment? How can I amplify the results of DI by using formative assessments? How might quality assessment tools like portfolios benefit all students? How will I know that differentiated formative assessment works?
