Next Generation Intelligent Optical Networks Stamatios Kartalopoulos, 2007-11-24 Optical networks have been in commercial deployment since the early 1980s as a result of advances in optical photonic and material technologies Although the initial deployment was based on silica ber with a single wavelength modulated at low data rates it was quickly demonstrated that ber can deliver much more bandwidth than any other transmission medium twisted pair wire coaxial cable or wireless Since then the optical network evolved to include more exciting technologies gratings optical lters optical multiplexers and optical ampli ers so that today a single ber can transport an unprecedented aggregate data rate that exceeds Tbps and this is not the upper limit yet Thus the ber optic network has been the network of choice and it is expected to remain so for many generationsto come for both synchronousand asynchronouspayloads voice data video interactive video games music text and more In the last few years we have also witnessed an increase in network attacks as a result of store andforwardcomputer basednodes These attackshave manymaliciousobjectives harvestsomeone else s data impersonate another user cause denial of service destroy les and more As a result a new eld in communicationis becomingimportant communicationnetworksand informationse rity In fact the network architect and system designer is currently challenged to include enhanced features such as intruder detection service restoration and countermeasures intruder avoidance and so on In all the next generation optical network is intelligent and able to detect and outsmart malicious intruders
