You are what you eat It's a saying that we've all heard time and time again The notion that good nutrition is essential for adequate growth and sound physical wellbeing is very well established Further in recent years there has been an overwhelming increase in research dedicated to better understanding how nutritional factors influence cognition and behaviour For example several studies have suggested that higher foetal exposure to omega 3 fatty acids and B vitamins such as folate promotes neurodevelopment B vitamins may also play a role in neurocognitive functioning in later life with some suggestion that lower vitamin B levels are associated with increased risk of dementia although randomised controlled trials investigating B vitamin supplementation as a cognitive enhancer in the elderly have provided inconclusive evidence as to the benefits of such therapy for dementia In fact the nutritional underpinnings of Alzheimer's disease and other disorders of cognitive ageing is becoming a much researched topic In addition consumption of several other foods has been found to convey more acute cognitively enhancing effects For example ingestion of carbohydrates e.g glucose caffeine resveratrol and several nutraceutical herbal extracts has been associated with short term improvements in cognitive performance Beyond specific micronutrients and macronutrients the current literature seems to support anecdotal evidence that consumption of a balanced breakfast is crucial to various measures of school performance including attention in the classroom What is clear

from this emerging literature is that the relationship between nutritional status and neurocognitive functioning at various stages of the lifespan is complex. An aim of this Research Topic is to bring together some recent empirical findings, reviews and commentaries of the literature to date and opinion pieces relating to future directions for this burgeoning field.

Autism Spectrum Disorders Tim Williams, 2011-09-06 Autism spectrum disorders are a major topic for research. The causes are now thought to be largely genetic, although the genes involved are only slowly being traced. The effects of ASD are often devastating and families and schools have to adapt to provide the best for people with ASD to attain their potential. This book describes some of the interventions and modifications that can benefit people with ASD.

Fad Diets and Adolescents Maya Michelle Kumar, Alicia Dixon Docter, 2022-11-15 Fad diets have influenced our society for hundreds of years. While they are heterogeneous in nature, they make many of the same promises: weight loss, fat burning, muscle building, flatter stomachs, improved gut health, clearer skin, and protection of animal rights and the environment. Not only are fad diets usually ineffective, they are often highly restrictive and associated with significant health risks. Furthermore, the practice of fad dieting dramatically increases one's risk of developing malnutrition and/or an eating disorder. Adolescence is a period of rapid physical and socioemotional growth during which young people become more vulnerable to poor body image and low self-esteem, which may make adolescents particularly likely to adopt fad diets. However, the nutritional risk incurred could result in serious and potentially permanent impairment of physical and psychosocial development. This book provides an overview of fad diets through the ages, highlighting what all fad diets have in common and how to recognize a fad diet. Readers will learn what science tells us about nutritional needs during adolescence for normal physical, cognitive, and socioemotional development and the risks that may be incurred if a fad diet prevents an adolescent from meeting these needs. This book examines why adolescents may be particularly prone to fad dieting and why they may also have more to lose if they adopt them. Readers will explore factors that shape adolescent diet culture. This book makes specific recommendations for caring adults in the lives of adolescents, including interdisciplinary health care providers, teachers, coaches, trainers, parents, and other caregivers, to steer adolescents away from fad diets and towards healthier alternatives for achieving their goals. The initial chapters are didactic chapters that outline core material. Subsequent chapters use illustrative case examples to teach the reader how to screen adolescents for fad dieting, listen to the concerns that attracted them to the diet, engage them in a discussion about their goals, and collaborate with them to find a healthier path. All chapters conclude with discussion questions for further reflection.
