City Of Light The Story Of Fiber Optics Sloan Technology:

City of Light Jeff Hecht, 1999 This text presents the history of the development of fibre optic technology explaining the scientific challenges that needed to be overcome the range of applications and future potential for this fundamental communications technology

City of Light Jeff Hecht, 2004-04-08 *City of Light* tells the story of fiber optics tracing its transformation from 19th century parlor trick into the foundation of our global communications network Written for a broad audience by a journalist who has covered the field for twenty years the book is a lively account of both the people and the ideas behind this revolutionary technology The basic concept underlying fiber optics was first explored in the 1840s when researchers used jets of water to guide light in laboratory demonstrations The idea caught the public eye decades later when it was used to create stunning illuminated fountains at many of the great Victorian exhibitions The modern version of fiber optics using flexible glass fibers to transmit light was discovered independently five times through the first half of the century and one of its first key applications was the endoscope which for the first time allowed physicians to look inside the body without surgery Endoscopes became practical in 1956 when a college undergraduate discovered how to make solid glass fibers with a glass cladding With the invention of the laser researchers grew interested in optical communications While Bell Labs and others tried to send laser beams through the atmosphere or hollow light pipes a small group at Standard Telecommunication Laboratories looked at guiding light by transparent fibers Led by the recipient of the 2009 Nobel Prize in Physics Charles K Kao they proposed the idea of fiber optic communications and demonstrated that contrary to what many researchers thought glass could be made clear enough to transmit light over great distances Following these ideas Corning Glass Works developed the first low loss glass fibers in 1970 From this point fiber optic communications developed rapidly The first experimental phone links were tested on live telephone traffic in 1977 and within half a dozen years long distance companies were laying fiber cables for their national backbone systems In 1988 the first transatlantic fiber optic cable connected Europe with North America and now fiber optics are the key element in global communications The story continues today as fiber optics spread through the communication grid that connects homes and offices creating huge information pipelines and replacing copper wires The book concludes with a look at some of the exciting potential developments of this technology

Kimerling,2015-05-06 Representing a further step towards enabling the convergence of computing and communication this handbook and reference treats germanium electronics and optics on an equal footing Renowned experts paint the big picture combining both introductory material and the latest results The first part of the book introduces readers to the fundamental properties of germanium such as band offsets impurities defects and surface structures which determine the performance of germanium based devices in conjunction with conventional silicon technology The second part covers methods of preparing and processing germanium structures including chemical and physical vapor deposition condensation approaches and chemical etching The third and largest part gives a broad overview of the applications of integrated germanium technology waveguides photodetectors modulators ring resonators transistors and prominently light emitting devices An invaluable one stop resource for both researchers and developers *Inventors of Communications Technology* Heather S.

Morrison,2015-07-15 A vital part of humanity involves ways in which we communicate with each other People have used many ways to communicate through talking writing video chatting for example As humanity has progressed so too have the ways humans communicate This book focuses on inventions of communication that have affected society From the typewriter to Skype communication is a process that is ever evolving and will continue to change as society changes *Understanding*

Physics David C. Cassidy,Gerald Holton,F.
