

DB2 11

The Ultimate Database for Cloud, Analytics & Mobile

For the past five years, every October, in line with IBM's largest "Big Data" conference in Las Vegas (IBMInsight), IBM has launched a new DB2 for z/OS book, and this year we are keeping up the tradition. This book builds on our previous book and has been written particularly for new and existing DB2 for z/OS customers and users. The book was directed by Surekha Parekh—WW Marketing Program Director for DB2 for z/OS—and has been written by four DB2 experts from IBM Silicon Valley Lab: John Campbell, Chris Crone, Gareth Jones, and Jay Yothers.

The book is divided into three parts:

DB2 11 Technical Overview

- This section focuses on technical features and functions of DB2 and explains how the new functions in DB2 11 can help enterprise customers address the challenges they face with the explosion of data and information. There has been rapid growth in the variety, volume, and velocity of data due to the growth of smart devices, mobile applications, cloud computing, and social media, and many of the enhancements in DB2 11 are focused on enabling enterprise customers to respond to these market opportunities in a cost-effective way.

DB2 11 Migration Planning and Early Customer Experiences

- In this section, targeted at existing DB2 for z/OS customers, the authors provide a detailed paper to help customers plan their DB2 11 migration strategy. This paper—a "must read" document for all existing customers—is an excellent opportunity to learn from best practices and prevent costly migration errors. Many customers who have already upgraded to DB2 11 and participated in our Early Support Program have kindly shared their experiences to enable our customers to speed the upgrade process and start exploiting some of this leading technology while reducing operating costs.

DB2 10 Migration to DB2 11 and Application Compatibility

- One of the most common obstacles that prevents customers from migrating to a new release is the need to implement any code changes required due to application incompatibilities, such as new reserved words. This section of the book describes application compatibility features in DB2 11 that allow such applications to continue to run under the new release until those changes can be implemented, removing them as an upgrade dependency.

We hope you enjoy this book, and we hope it saves you time and money. Find out why DB2 11 is still the #1 Enterprise Data Server and the choice for most Fortune 100® companies.

storing and analyzing exploding amounts of business or organizational data while managing risk and trying to meet new regulatory and compliance requirements This book describes recent extensions to DB2 for z OS in V10 and V11 that can help organizations address these challenges *DB2 12 for z Optimizer* Terry Purcell, IBM Redbooks, 2017-06-28 There has been a considerable focus on performance improvements as one of the main themes in recent IBM DB2 releases and DB2 12 for IBM z OS is certainly no exception With the high value data retained on DB2 for z OS and the z Systems platform customers are increasingly attempting to extract value from that data for competitive advantage Although customers have historically moved data off platform to gain insight the landscape has changed significantly and allowed z Systems to again converge operational systems with analytics for real time insight Business critical analytics is now requiring the same levels of service as expected for operational systems and real time or near real time currency of data is expected Hence the resurgence of z Systems As a precursor to this shift IDAA brought the data warehouse back to DB2 for z OS and with its tight integration with DB2 significantly reduces data latency as compared to the ETL processing that is involved with moving data to a stand alone data warehouse environment That change has opened up new opportunities for operational systems to extend the breadth of analytics processing without affecting the mission critical system and integrating near real time analytics within that system all while maintaining the same z Systems qualities of service Apache Spark on z OS and Linux for System z also allow analytics in place in real time or near real time Enabling Spark natively on z Systems reduces the security risk of multiple copies of the Enterprise data while providing an application developer friendly platform for faster insight in a simplified and more secure analytics framework How is all of this relevant to DB2 for z OS Given that z Systems is proving again to be the core Enterprise Hybrid Transactional Analytical Processing HTAP system it is critical that DB2 for z OS can handle its traditional transactional applications and address the requirements for analytics processing that might not be candidates for these rapidly evolving targeted analytics systems And not only are there opportunities for DB2 for z OS to play an increasing role in analytics the complexity of the transactional systems is increasing Analytics is being integrated within the scope of those transactions DB2 12 for z OS has targeted performance to increase the success of new application deployments and integration of analytics to ensure that we keep pace with the rapid evolution of IDAA and Spark as equal partners in HTAP systems This paper describes the enhancements delivered specifically by the query processing engine of DB2 This engine is generally called the optimizer or the Relational Data Services RDS components which encompasses the query transformation access path selection run time and parallelism DB2 12 for z OS also delivers improvements targeted at OLTP applications which are the realm of the Data Manager Index Manager and Buffer Manager components to name a few and are not identified here Although the performance measurement focus is based on reducing CPU improvement in elapsed time is likely to be similarly achieved as CPU is reduced and performance constraints alleviated However elapsed time improvements can be achieved with parallelism and DB2 12 does increase the percentage offload for parallel child tasks

which can further reduce chargeable CPU for analytics workloads
