Dense Gases For Extraction And Refining:

Dense Gases for Extraction and Refining Egon Stahl, Karl-Werner Quirin, Dieter Gerard, 2012-12-06 Procedures for extracting or refining sensitive substances using dense gases have been developed for numerous purposes Dense carbon dioxide is already being used industrially for decaffeination of coffee and extraction of hops Further possible applications have been tested on the laboratory or pilot plant scales and shown to be mostly economical Uses as varied as the non aggressive extraction of spice extraction of polymers refining of spent oil pyrolysis extraction of wood and liquefaction of coal show the extremely wide range of application The book comprehensively reviews the present state of development and features examples of application of this new technique Dense Gases for Extraction and Refining E. Stahl, K. W. Quirin, D. Gerard, 1986

Dense Gases for Extraction and Refining (translated from German)., 1988 *Extraction Optimization in Food Engineering* Constantina Tzia, George Liadakis, 2003-07-21 The only comprehensive source on extraction process optimization this book details the installation construction development modeling control and economics of conventional and specialized extraction systems in the food processing industry It supplies case studies for illustration of specific extraction systems in commercial food production

Technology and Solvents for Extracting Oilseeds and Nonpetroleum Oils Peter J. Wan, Phillip J. Wakelyn, 1997 This book brings together current information on technology and solvents for extracting oilseeds The editors hope that this monograph will serve as a useful reference for the managers and engineers in oil extraction and its allied industries and a starting point for researchers in searching for the optimum solvent for extraction of any given oil bearing materials

Handbook of Food Engineering Dennis R. Heldman, Daryl B. Lund, Cristina Sabliov, 2018-12-19 As the complexity of the food supply system increases the focus on processes used to convert raw food materials and ingredients into consumer food products becomes more important The Handbook of Food Engineering Third Edition continues to provide students and food engineering professionals with the latest information needed to improve the efficiency of the food supply system As with the previous editions this book contains the latest information on the thermophysical properties of foods and kinetic constants needed to estimate changes in key components of foods during manufacturing and distribution Illustrations are used to demonstrate the applications of the information to process design Researchers should be able to use the information to pursue new directions in process development and design and to identify future directions for research on the physical properties of foods and kinetics of changes in the food throughout the supply system Features Covers basic concepts of transport and storage of liquids and solids heating and cooling of foods and food ingredients New chapter covers nanoscale science in food systems Includes chapters on mass transfer in foods and membrane processes for liquid concentration and other applications Discusses specific unit operations on freezing concentration dehydration thermal processing and extrusion The first four chapters of the Third Edition focus primarily on the properties of foods and food ingredients with a new chapter on nanoscale applications in foods Each of the

eleven chapters that follow has a focus on one of the more traditional unit operations used throughout the food supply system Major revisions and or updates have been incorporated into chapters on heating and cooling processes membrane processes extrusion processes and cleaning operations

High Pressure Process Technology: Fundamentals and Applications

A. Bertucco, G. Vetter, 2001-10-15 Clear evidence of increasing demands in the processing industry prompted the editors and authors to publish a new book about High Pressure Process Technology Fundamentals and Applications This book presents the latest knowledge regarding the high pressure processing aspects combined with that about the modeling the design and the operation of safe and reliable high pressure plants and equipment This treatment and selection of the subjects is stimulating and unique Consisting of nine chapters each subdivided into several sections the book addresses the high pressure aspects providing well selected correlated information connected with a comprehensive overview together with a large number of references The main body of the first eight chapters refers to subjects like high pressure in general the thermodynamics and kinetics of the fluids involved the design of high pressure equipment the modeling and design of reactors separation and fractionation units the safety aspects the control and economics In the extended last chapter examples of promising high pressure applications are explained such as chemical and enzymatic reactions in supercritical solvents hydrogenation under supercritical conditions supercritical water oxidation polymerization with metallocene catalysts supercritical extraction fractionation and precipitation supercritical pharma processing ultra high pressure sterilization and supercritical dry cleaning

Gradient HPLC of Copolymers and Chromatographic Cross-Fractionation

Gottfried Glöckner, 2012-12-06 The problems involved in separating complex macromolecules require understanding not only the chromatographic process but also the physicochemical behavior of the solutes This sentence from the pen of Phyllis R Brown 1 University of Rhode Island can certainly be applied to synthetic copolymers whose structure is very complex indeed Thus it may be forgiven that a book on copolymer HPLC has been written not by a trained chromatographer but by someone from the polymer side The HPLC of synthetic polymers is often understood to mean only a synonym for size exclusion chromatography The latter method separates polymers according to the size of the macromolecules and enables the molecular weight distribution of a sample to be evaluated But as early as 1936 Mark and Saito attempted chromatographic fractionation of cellulose acetate on a charcoal like adsorbent made from blood HPLC adsorption chromatography was first applied to copolymer analysis by Teramachi et al in 1979 Since then another branch of polymer HPLC has arisen which has the capacity of separating copolymers by composition and enables the chemical composition distribution to be evaluated The technique requires a suitable elution program and is mainly carried out as gradient elution

Handbook of Analytical

Therapeutic Drug Monitoring and Toxicology (1996) Steven H.Y. Wong, Irving Sunshine, 2017-11-22 Adapting modern advances in analytical techniques to daily laboratory practices challenges many toxicologists clinical laboratories and pharmaceutical scientists The Handbook of Analytical Therapeutic Drug Monitoring and Toxicology helps you keep abreast of

the innovative changes that can make your laboratory and the studies undertaken in it a success This volume simplifies your search for appropriate techniques describes recent contributions from leading investigators and provides valuable evaluations and advice

Extraction of Natural Products Using Near-Critical Solvents M.B. King,T.R. Bott,2012-12-06

The aim of this book is to present the current state of the art of extracting natural products with near critical solvents and to view the possibilities of further extensions of the technique Relevant background theory is given but does not dominate the book Carbon dioxide is the near critical solvent used in most recent applications and inevitably receives prominence In addition to general descriptions and reviews the book contains three chapters by industrial practitioners who describe in detail the operation of their processes and discuss the market for their products Sections on the design of the pressure vessels and pumps required in these processes and on the acquisition of the data required for design are included The costing of the processes is also discussed There is good scope for combining a near critical extraction step with other process steps in which the properties of near critical solvents are utilised for example as a reaction or crystallisation medium and a chapter is devoted to these important aspects It is hoped that the work will be found to contain a great deal of specific information of use to those already familiar with this field However the style of presentation and content is such that it will also be useful as an introduction In particular it will be helpful to those wondering if this form of separation method has anything to offer for them whether they are engineers chemists or managers in industry or in academic or research institutions
