Schmid,Wander Lowie,2011-03-14 This volume presents an overview of changes in paradigms perspectives and contexts of
research into bilingual development over the past two decades During this time the focus of perspective has changed In the
early 1990s most investigations still proceeded from models that assumed modular components hierarchical relationships
and linear processes and investigated what were perceived to be the typical contexts of bilingual development sequential
usually instructed bilingualism where the second language would remain the weaker one and the speakers investigated were
typically young adults More recently it has been proposed that such models may not be complex enough to accommodate
bilingual development in all its facets and settings bimodal bilingualism attrition aging This change has recently culminated
in applications of chaos theory to Applied Linguistics and in the widening range of situations of language acquisition learning
and deterioration which have been investigated An Investigation Into the Comparability of Two Tests of English as a
Foreign Language Lyle F. Bachman,1995-03-16 This book documents a major study comparing the Cambridge First
Certificate in English FCE with the Test of English as a Foreign Language TOEFL to investigate similarities in test content
candidature and use While both tests were designed to measure many of the same abilities they represent radically different
approaches to language test development reflecting deeper differences between educational measurement traditions in the
US and UK The thorough investigation of the fundamental characteristics and operational utility of two of the most widely
used English tests for foreign students makes this study a valuable contribution to language testing research As such it will
be of considerable interest to language testing specialists and examination boards as well as to academic researchers and
graduate students in the field of language assessment more generally Talking and Testing Richard Young,Agnes Weiyun
He,1998-07-15 This book brings together a collection of current research on the assessment of oral proficiency in a second
language Fourteen chapters focus on the use of the language proficiency interview or LPI to assess oral proficiency The
volume addresses the central issue of validity in proficiency assessment the ways in which the language proficiency interview
is accomplished through discourse Contributors draw on a variety of discourse perspectives including the ethnography of
speaking conversation analysis language socialization theory sociolinguistic variation theory human interaction research and
systemic functional linguistics And for the first time LPIs conducted in German Korean and Spanish are examined as well as

interviews in English This book sheds light on such important issues as how speaking ability can be defined independently of an LPI that is designed to assess it and the extent to which an LPI is an authentic representation of ordinary conversation in the target language It will be of considerable interest to language testers discourse analysts second language acquisition researchers foreign language specialists and anyone concerned with proficiency issues in language teaching and testing
