Collected Works Vol 3 Unpublished Essays And Lectures:

Kurt Gödel: Collected Works: Volume II Kurt Gödel, 1990-04-05 Kurt Gödel 1906-1978 was the most outstanding logician of the twentieth century. This second volume of a comprehensive edition of Gödel's works collects the remainder of his published work covering the period 1938-1974. Volume I included all of his publications from 1929-1936. Each article or closely related group of articles is preceded by an introductory note that elucidates it and places it in historical context. The aim is to make the full body of Gödel's work as accessible and useful to as wide an audience as possible without in any way sacrificing the requirements of historical and scientific accuracy. *Contemporary Perspectives in Philosophy and Methodology of Science* Wenceslao J. González, 2006 Nowadays philosophy and methodology of science appear as a combination of novelty and continuity. This blend is clear both in the general approaches to science those thought of as any science and in the specific perspectives on every science either formal or empirical. There are new topics for philosophical reflection such as key issues in philosophy of medicine and central problems raised by neuroscience. Thus new contents have brought attention to aspects that previously went almost unnoticed. In addition there are new angles for philosophical study such as the repercussion of society on scientific activity in aims, processes and results. But the background of the main philosophical and methodological trends of the twentieth century is in many ways still in place. **Logic from Russell to Church** Dov M. Gabbay, John Woods, 2009-06-16 This volume is number five in the 11 volume Handbook of the History of Logic. It covers the first 50 years of the development of mathematical logic in the 20th century and concentrates on the achievements of the great names of the period: Russell, Post, Gödel, Tarski, Church and the like. This was the period in which mathematical logic gave mature expression to its four main parts: set theory, model theory, proof theory and recursion theory. Collectively this work ranks as one of the greatest achievements of our intellectual history. Written by leading researchers in the field, both this volume and the Handbook as a whole are definitive reference tools for senior undergraduates, graduate students and researchers in the history of logic, the history of philosophy and any discipline such as mathematics, computer science and artificial intelligence for whom the historical background of his or her work is a salient consideration. The entire range of modal logic is covered. Serves as a singular contribution to the intellectual history of the 20th century. Contains the latest scholarly discoveries and interpretative insights. **From Kant to Husserl** Charles Parsons, 2012-03-15 In *From Kant to Husserl* Charles Parsons examines a wide range of historical opinion on philosophical questions from mathematics to phenomenology. Amplifying his early ideas on Kant's philosophy of arithmetic, the author then turns to reflections on Frege, Brentano and Husserl. Philosophical Knowledge Christian Beyer, Alex Burri, 2007 Philosophical Intuitions: Their Target, Their Source and Their Epistemic Status. Naturalism and Intuitions: Intuitions, Their Nature and Epistemic Efficacy. The Nature of Rational Intuitions and a Fresh Look at the Explanationist Objection. Philosophical Knowledge and Knowledge of Counterfactuals. The Possibility of Knowledge. Transcendental Arguments. A Plea for Modesty. A Priori Existence. A Guided

Intuition and the Axiomatic Method Emily Carson, Renate Huber, 2006-01-24 Following developments in modern geometry logic and physics many scientists and philosophers in the modern era considered Kant's theory of intuition to be obsolete But this only represents one side of the story concerning Kant intuition and twentieth century science Several prominent mathematicians and physicists were convinced that the formal tools of modern logic set theory and the axiomatic method are not sufficient for providing mathematics and physics with satisfactory foundations All of Hilbert G del Poincar Weyl and Bohr thought that intuition was an indispensable element in describing the foundations of science They had very different reasons for thinking this and they had very different accounts of what they called intuition But they had in common that their views of mathematics and physics were significantly influenced by their readings of Kant In the present volume various views of intuition and the axiomatic method are explored beginning with Kant's own approach By way of these investigations we hope to understand better the rationale behind Kant's theory of intuition as well as to grasp many facets of the relations between theories of intuition and the axiomatic method dealing with both their strengths and limitations in short the volume covers logical and non logical historical and systematic

issues in both mathematics and physics *The Oxford Handbook of Leibniz* Maria Rosa Antognazza, 2018 This volume provides a uniquely comprehensive systematic and up to date appraisal of Leibniz's thought thematically organized around its diverse but interrelated aspects By pulling together the best specialized work in the many domains to which Leibniz contributed its ambition is to offer the most rounded picture of Leibniz's endeavors currently available **The History of Continua** Stewart Shapiro, Geoffrey Hellman, 2020-12-01 Mathematical and philosophical thought about continuity has changed considerably over the ages Aristotle insisted that continuous substances are not composed of points and that they can only be divided into parts potentially There is something viscous about the continuous It is a unified whole This is in stark contrast with the prevailing contemporary account which takes a continuum to be composed of an uncountably infinite set of points This volume presents a collective study of key ideas and debates within this history The opening chapters focus on the ancient world covering the pre-Socratics Plato Aristotle and Alexander The treatment of the medieval period focuses on a relatively recently discovered manuscript by Bradwardine and its relation to medieval views before during and after Bradwardine's time In the so-called early modern period mathematicians developed the calculus and with that the rise of infinitesimal techniques thus transforming the notion of continuity The main figures treated here include Galileo Cavalieri Leibniz and Kant In the early part of the nineteenth century Bolzano was one of the first important mathematicians and philosophers to insist that continua are composed of points and he made a heroic attempt to come to grips with the underlying issues concerning the infinite The two figures most responsible for the contemporary orthodoxy regarding continuity are Cantor and Dedekind Each is treated in an article investigating their precursors and influences in both mathematics and philosophy A new chapter then provides a lucid analysis of the work of the mathematician Paul Du Bois Reymond to argue for a constructive account of continuity in opposition to the dominant Dedekind-Cantor account This leads to consideration of the contributions of Weyl Brouwer and Peirce who once dubbed the notion of continuity the master key which unlocks the arcana of philosophy And we see that later in the twentieth century Whitehead presented a point-free or gunky account of continuity showing how to recover points as a kind of extensive abstraction The final four chapters each focus on a more or less contemporary take on continuity that is outside the Dedekind-Cantor hegemony a predicative approach accounts that do not take continua to be composed of points constructive approaches and non-Archimedean accounts that make essential use of infinitesimals **Logical Foundations of Computer Science** Sergei Artemov, Anil Nerode, 2019-12-13 This book constitutes the refereed proceedings of the International Symposium on Logical Foundations of Computer Science LFCS 2020 held in Deerfield Beach FL USA in January 2020 The 17 revised full papers were carefully reviewed and selected from 30 submissions The scope of the Symposium is broad and includes constructive mathematics and type theory homotopy type theory logic automata and automatic structures computability and randomness logical foundations of programming logical aspects of computational complexity parameterized complexity logic programming and
