

Capable-to-Match (CTM)

- Capable-to-match (CTM) is an APO tool to perform DP/PP interactively
- To run CTM, the user needs to prioritize demand elements, categorize supply elements, match demands with the supplies, according to a strategy to search existing stocks, planned receipts, and/or with production.
- CTM planning is a first-come, first-serve heuristic; as a result, shortages may occur to late comers.
- CTM approach usually applies when demand priorities (e.g. demand type, customer priorities, product priorities) exists

Real Optimization with SAP® APO Josef Kallrath, Thomas I. Maindl, 2006-09-02 Optimization is a serious issue touching many aspects of our life and activity But it has not yet been completely absorbed in our culture In this book the authors point out how relatively young even the word model is On top of that the concept is rather elusive How to deal with a technology that finds applications in things as diverse as logistics robotics circuit layout financial deals and traffic control Although during the last decades we made significant progress the broad public remained largely unaware of that The days of John von Neumann with his vast halls full of people frantically working mechanical calculators are long gone Things that looked completely impossible in my youth like solving mixed integer problems are routine by now All that was not just achieved by ever faster and cheaper computers but also by serious progress in mathematics But even in a world that more and more understands that it cannot afford to waste resources optimization remains to a large extent unknown It is quite logical and also fortunate that SAP the leading supplier of enterprise management systems has embedded an optimizer in his software The authors have very carefully investigated the capabilities and the limits of APO Remember that optimization is still a work in progress We do not have the tool that does everything for everybody
