Pignatello,2013-10-31 This chapter will summarize recent information on cell membranes Their structure functions and the role of the various components are discussed considering both their physiological tasks such as mechanisms of drug internalization into cells as well as membrane changes associated with or caused by particular disease states Later chapters will discuss the possibility of testing biomembrane models to study their interaction with drugs and biological compounds

Drug-Biomembrane Interaction Studies Rosario Pignatello,2013-10-31 The design and development of drugs and new pharmaceutical formulations require a full characterization of the chemical and physicochemical events occurring at the level of the single active ingredients or excipients as well as their reciprocal interaction Thermal analysis techniques are among the most widely used methods to achieve this among them the Differential Scanning Calorimetry DSC technique in which the thermotropic behaviour of a single substance or mixtures is analyzed as a function of a controlled temperature program DSC is an accurate and rapid thermo analytical technique widely used by the pharmaceutical industry and in drug research to investigate several physico chemical phenomena such as polymorphism melting and crystallization purity and drug excipient interaction as well as characterizing biomolecules such as genetic material Drug biomembrane interaction studies is written by scientists renowned for their work in the field of DSC applications to drug development and delivery and especially to drug biomembrane interaction studies The book combines insights from biochemistry and physiology with those from

structural biology nanotechnology and biothermodynamics to obtain a complete depiction of cell membranes and their functions Summarizes and updates the recent development in a unique handbook format Consists of a combination of scientific updates within the field Contains chapters written by some of the highest level experts in the field of DSC *The Neuroethology of Predation and Escape* Keith T. Sillar, Laurence D. Picton, William J. Heitler, 2016-04-01 THE NEUROETHOLOGY OF PREDATION AND ESCAPE To eat and not get eaten is key to animal survival and the arms race between predators and prey has driven the evolution of many rapid and spectacular behaviours This book explores the neural mechanisms controlling predation and escape where specialisations in afferent pathways central circuits motor control and biomechanics can be traced through to natural animal behaviour Each chapter provides an integrated and comparative review of case studies in neuroethology Ranging from the classic studies on bat biosonar and insect counter measures through to fish eating snails armed with powerful neurotoxins the book covers a diverse and fascinating range of adaptations Common principles of biological design and organization are highlighted throughout the text The book is aimed at several audiences for lecturers and students This synthesis will help to underpin the curriculum in neuroscience and behavioural biology especially for courses focusing on neuroethology for postgraduate students The sections devoted to your area of specialism will give a flying start to your research reading while the other chapters offer breadth and insights from comparative studies for academic researchers The book will provide a valuable resource and an enjoyable read Above all we hope this book will inspire the next generation of neuroethologists *World Congress on Medical Physics and Biomedical Engineering, June 7-12, 2015, Toronto, Canada* David A.
