Crime Modeling and Mapping Using Geospatial

Technologies Michael Leitner, 2013-01-19 Recent years in North America have seen a rapid development in the area of crime analysis and mapping using Geographic Information Systems GIS technology In 1996 the US National Institute of Justice NIJ established the crime mapping research center CMRC to promote research evaluation development and dissemination of GIS technology The long term goal is to develop a fully functional Crime Analysis System CAS with standardized data collection and reporting mechanisms tools for spatial and temporal analysis visualization of data and much more Among the drawbacks of current crime analysis systems is their lack of tools for spatial analysis For this reason spatial analysts should research which current analysis techniques or variations of such techniques that have been already

successfully applied to other areas e.g. epidemiology, location allocation analysis etc. can also be employed to the spatial analysis of crime data. This book presents a few of those cases.

Crime Prediction Using GIS and Statistical Modelling
Priyanka Biswas, Nilanjana Das Chatterjee, 2025-02-17
The study presented in this SpringerBrief uses GIS tools to analyze incidents of violence against women in West Bengal, India, identifying hotspots and offering tools and strategies to predict and prevent future violence. The aim of this study is to understand the existing scenarios and the complex crime patterns committed against women in West Bengal using advanced GIS tools to map and understand the underlying socio-economic and physical environmental contexts of specific crime events and critically discussed emerging criminogenic issues on the basis of theoretical understanding and immediate situations. This study evaluates the effectiveness of existing legislative measures to extract the gaps that exist between policy formulation and execution and effectively applied statistical methods and GIS technologies to visualize the future potential crime areas so that possible measures might be taken. The study considers four categories of violence perpetrated on women: human trafficking, acid attacks, rape, and sexual harassment. Each chapter follows a self-contained design to address the study objectives as each crime follows a distinct crime pattern differentially affecting the targets and increasing risk of victimization, and differential key factors are responsible for specific crime occurrences.

Environmental Criminology and Crime Analysis
Richard Wortley, Michael Townsley, 2016-11-01
Environmental criminology is a term that encompasses a range of overlapping perspectives. At its core, the many strands of environmental criminology are bound by a common focus on the role that the immediate environment plays in the performance of crime and a conviction that careful analyses of these environmental influences are the key to the effective investigation, control, and prevention of crime. This new edition brings together leading theorists and practitioners in the field to provide a comprehensive integrative coverage of the field of environmental criminology and crime analysis. This book is divided into three sequential parts: Understanding the crime event explores routine activity approach, crime pattern theory, the rational choice perspective, and situational precipitators of crime; Analysing crime patterns discusses crime mapping, offender mobility, repeat victimisation, geographic profiling, and crime scripts; Preventing and controlling crime covers topics including problem-oriented policing, situational crime prevention, and environmental design. Fully updated and including new chapters on crime scripts and offender mobility, a scene setting introductory overview, and critical thinking questions at the end of each chapter, this text is an essential and comprehensive resource for practitioners and students taking courses on environmental criminology, crime analysis, and crime prevention.
