

Bucket replacement

⚠ WARNING

Flying object!
Always wear eye or full face protection when performing this procedure.
Failure to comply could result in death or serious injury.

1. Lower the bucket to the ground.

NOTE: place the bucket in light contact with the ground. If the bucket is lowered strongly to the ground, the resistance will be increased and it will be difficult to remove the pins.

2. Put the safety lever in LOCK position (safety lever in rearward position), and stop the engine.
3. Remove the stopper bolts (1) and the nuts (2), then remove the pins (3) from the arm (B) and the pin (4) from the link (C).
4. Remove the bucket (A).

NOTE: after the removal of the pins, make sure that they are not contaminated with sand or mud and that the seals of the bushing on both sides are not damaged.

5. Align the arm (B) with the holes (D) and the link (C) with the holes (E), then coat with grease and install the pins (3) and (4).
6. When installing the bucket, the O-rings (5) are easily damaged, so fit the O-rings (5) on the boss of the bucket.
7. After knocking the pins, move the O-ring down to the regular groove. Install the stopper bolts (1) and the nuts (2) for each pin, then grease the pin.
