Cognitive-Behavioral Play Therapy Susan M. Knell, 1995-10-01 Cognitive Behavioral Play Therapy CBPT incorporates cognitive and behavioral interventions within a play therapy paradigm It provides a theoretical framework based on cognitive behavioral principles and integrates these in a developmentally sensitive way Thus play as well as verbal and nonverbal approaches are used in resolving problems CBPT differs from nondirective play therapy which avoids any direct discussion of the child's difficulties A specific problem solving approach is utilized which helps the child develop more adaptive thoughts and behaviors Cognitive behavioral therapies are based on the premise that cognitions determine how people feel and act and that faulty cognitions can contribute to psychological disturbance Cognitive behavioral therapies focus on identifying maladaptive thoughts understanding the assumptions behind the thoughts and learning to correct or counter the irrational ideas that interfere with healthy functioning Since their development approximately twenty five years ago such therapies have traditionally been used with adults and only more recently with adolescents and children It has commonly been thought that preschool age and school age children are too young to understand or correct distortions in their thinking However the recent development of CBPT reveals that cognitive strategies can be used effectively with young children if treatments are adapted in order to be developmentally sensitive and attuned to the child's needs For example while the methods of cognitive therapy can be communicated to adults directly these may need to be conveyed to children indirectly through play activities In particular puppets and stuffed animals can be very helpful in modeling the use of cognitive strategies such as countering irrational beliefs and making positive self statements CBPT is structured and goal oriented and intervention is directive in nature

It Hurts When I Poop! Howard J. Bennett, 2007-05-15 iParenting Media Award Winner Helping children overcome their fear of pooping with colorful illustrations and a thoughtful story Ryan is scared to use the potty He is afraid to have a poop because he's afraid it's going to hurt He does NOT want to go This story along with Ryan's poop program will help young children gain the confidence they need to overcome this common problem and establish healthy habits Includes a Note to Parents by the author From the Note to Parents The book includes a poop program that I use with children between the ages of 3 and 6 While the program is ostensibly for the main character my hope is that your child will want to follow these steps as well How you approach the program will vary somewhat depending on your child's age Most 3 to 4 year olds do not need to do the program in a formal way Instead you can incorporate parts of the program into your daily routine make the needed dietary changes reward successful pooping with stickers and consider reviewing how poops come out of the body Most 5 to 6 year olds are interested in doing the full program though it is still important to be flexible For example if a 5 year old does not want to do Potty Practice I would adjust things accordingly
