Cluster Algebra And Poisson Geometry Mathematical Surveys And Monographs:

Cluster Algebras and Poisson Geometry Michael Gekhtman, Michael Shapiro, Alek Vainshtein, 2010 The first book devoted to cluster algebras this work contains chapters on Poisson geometry and Schubert varieties an introduction to cluster algebras and their main properties and geometric aspects of the cluster algebra theory in particular on its relations to Poisson geometry and to the theory of integrable systems *Quantum Cluster Algebra Structures on Quantum Nilpotent Algebras* K. R. Goodearl, M. T. Yakimov, 2017-04-25 All algebras in a very large axiomatically defined class of quantum nilpotent algebras are proved to possess quantum cluster algebra structures under mild conditions Furthermore it is shown that these quantum cluster algebras always equal the corresponding upper quantum cluster algebras Previous approaches to these problems for the construction of quantum cluster algebra structures on quantized coordinate rings arising in Lie theory were done on a case by case basis relying on the combinatorics of each concrete family The results of the paper have a broad range of applications to these problems including the construction of quantum cluster algebra structures on quantum unipotent groups and quantum double Bruhat cells the Berenstein Zelevinsky conjecture and treat these problems from a unified perspective All such applications also establish equality between the constructed quantum cluster algebras and their upper counterparts

Representation Theory, Mathematical Physics, and Integrable Systems Anton Alekseev, Edward Frenkel, Marc Rosso, Ben Webster, Milen Yakimov, 2022-02-05 Over the course of his distinguished career Nicolai Reshetikhin has made a number of groundbreaking contributions in several fields including representation theory integrable systems and topology The chapters in this volume compiled on the occasion of his 60th birthday are written by distinguished mathematicians and physicists and pay tribute to his many significant and lasting achievements Covering the latest developments at the interface of

noncommutative algebra differential and algebraic geometry and perspectives arising from physics this volume explores topics such as the development of new and powerful knot invariants new perspectives on enumerative geometry and string theory and the introduction of cluster algebra and categorification techniques into a broad range of areas Chapters will also cover novel applications of representation theory to random matrix theory exactly solvable models in statistical mechanics and integrable hierarchies The recent progress in the mathematical and physical aspects of deformation quantization and tensor categories is also addressed Representation Theory Mathematical Physics and Integrable Systems will be of interest to a wide audience of mathematicians interested in these areas and the connections between them ranging from graduate students to junior mid career and senior researchers

Exotic Cluster Structures on SL_n : The Cremmer-Gervais Case M. Gekhtman, M. Shapiro, A. Vainshtein, 2017-02-20 This is the second paper in the series of papers dedicated to the study of natural cluster structures in the rings of regular functions on simple complex Lie groups and Poisson Lie structures compatible with these cluster structures According to our main conjecture each class in the Belavin Drinfeld classification of Poisson Lie structures corresponds to a cluster structure in The authors have shown before that this conjecture holds for any in the case of the standard Poisson Lie structure and for all Belavin Drinfeld classes in In this paper the authors establish it for the Cremmer Gervais Poisson Lie structure on which is the least similar to the standard one
