

2. Connect battery and spark plug wire(s). See **Connecting the Battery – Gasoline Vehicles** on page 1-3.
3. Place the Forward/Reverse handle in the NEUTRAL position, chock the wheels, and place the neutral lockout cam in the MAINTENANCE position.
4. Connect a tachometer (P/N 1016112) to the spark plug lead.
5. With the tachometer connected, and the engine at normal operating temperature, check high speed RPM. With the accelerator pedal pressed to the floor, the tachometer should read 2950 $\pm$ 30 RPM.
6. To **reduce** RPM, adjust the two lock nuts (12) to move the cable housing toward the rear of the vehicle until the specified RPM is reached (**Figure 16-6, Page 16-7**). To **increase** RPM, adjust the two lock nuts (12) to move the cable housing forward until the specified RPM is reached.
7. Be sure both lock nuts are locked against the bracket and then check the RPM again. If the RPM needs to be adjusted, repeat step 6.
8. If more adjustment is required than the cable housing will allow, make sure the spring on the other end of the accelerator cable is properly positioned. Excessive belt and torque converter wear can also prevent proper RPM adjustment. Check them for excessive wear. See **Section 19 – Torque Converter: Gasoline Vehicle**.

CHOKE AND AIR INTAKE SYSTEM

See **General Warnings** on page 1-1.

GENERAL INFORMATION

The choke and air intake system is a simple mechanism requiring very little or no maintenance. The system consists of a choke assembly mounted at the center of the kick plate. An air filter housing draws clean, cool air from beneath the vehicle via an opening between the kick plate and the fuel bucket. The air passes through an air filter, through the choke assembly, and through a hose to the carburetor. (**Figure 16-8, Page 16-9**)

The choke system aids in starting the engine in cold weather. When starting a cold engine, the spring loaded choke cover is pushed in by hand. This restricts the air flow, creating a "fuel rich" mixture in the carburetor. The choke cover is held in until the engine starts, and then is released. The air flow to the engine is no longer restricted, and the engine operates normally.

The choke assembly is adjusted at the factory and does not require field adjustment; however, if the choke assembly is subjected to abuse or damaged, it may become necessary to replace the assembly.
