Innovations for Next-Generation Antibody-Drug Conjugates Marc Damelin, 2018-05-29 Antibody drug conjugates ADCs stand at the verge of a transformation Scores of clinical programs have yielded only a few regulatory approvals but a wave of technological innovation now empowers us to overcome past technical challenges This volume focuses on the next generation of ADCs and the innovations that will enable them The book inspires the future by integrating the field's history with novel strategies and cutting edge technologies While the book primarily addresses ADCs for solid tumors the last chapter explores the emerging interest in using ADCs to treat other diseases The therapeutic rationale of ADCs is strong to direct small molecules to the desired site of action and away from normal tissues by conjugation to antibodies or other targeting moieties However the combination of small and large molecules imposes deep complexity to lead optimization pharmacokinetics toxicology analytics and manufacturing The field has made significant advances in all of these areas by improving target selection ADC design manufacturing methods and clinical strategies These innovations will inspire and educate scientists who are designing next generation ADCs with the potential to transform the lives of patients Issues and Debates in Cyberpsychology Linda Kaye, 2021-11-26 This comprehensive and accessibly written book brings together in one place for the first time the wealth of debates within cyberpsychology Is the distinction between so called digital natives and digital immigrants meaningful in practice What is the difference between screen time and screen use and why has one been pathologized while the other has not Is social media really bad for wellbeing This book considers these issues and more in depth with clear informed resolutions and conclusions no longer being mediated by jargon filled articles or misrepresentative media headlines Key features include Real World Applications boxes signposting why each debate is pertinent and what the implications may be in practice Take Home Messages boxes helpfully summarising what students need to know and why Linda K Kaye is Senior Lecturer in Psychology at Edge Hill University UK and Chair of the BPS Cyberpsychology section She is known online as The Cyber Doctor where she regularly blogs for a broad audience as well as providing public comment for outlets including The Guardian Stylist The Telegraph and The Independent on topics such as internet accessibility and inclusivity zoom fatigue and last but not least what your favourite emoji says about you Signalling Pathways in Embryonic Development Juan J. Sanz-Ezquerro, Andrea E. Münsterberg, Sigmar Stricker, 2017-11-30 The formation of a complex multicellular organism from a single cell is one of the most amazing processes of biology Embryonic development is characterised by the careful regulation of cellular behaviours such that cells proliferate migrate differentiate and form tissues at the correct place and time These processes are genetically controlled and depend both on the history of cells their lineage and on the activities of signalling pathways which coordinate the cell interactions leading to organogenesis The aim of the Frontiers research topic Signalling pathways in embryonic development has been to provide a forum for experts in cell and developmental biology to share recent advances in the field of signalling during embryonic development Sixteen articles

in a variety of formats are united in this Topic offering a valuable collection for researchers looking for an update in the knowledge of signalling pathways operating during embryogenesis The works focused mainly on vertebrates explore different aspects of this theme from cell communication to organ formation and have implications for areas as distant as evolution or pathology Understanding developmental signalling pathways is important for several reasons It gives us information about basic mechanisms of cell function and interactions needed for morphogenesis and organogenesis It uncovers the basis of congenital malformations since errors at any step of cell signalling during development are a major cause of defects This fundamental insight gives us clues to understand the mechanisms operating in evolution that explain diversity in form and function And finally it allows the identification of possible causes of disease in the adult organism such as cancer or degenerative diseases pinpointing possible targets for therapeutic approaches
