

3.4 Luffing Gear 2 - Changing the Oil (Z 30 240)

When changing the oil, it must be drained off while still warm, i.e. after a longer period of operation.

- The oil should be changed on luffing gear 2 when the Superlift mast is in the 90° position.
- To carry out the oil change safely, you must plan the procedure carefully and use a personnel cage attached to an auxiliary crane.
- For practical reasons, we recommend that the oil level be checked during assembly and dismantling of the crane.

Before the oil level can be checked:

- the main boom and fly jib must be placed on the ground, if they are fixed.
- the Superlift mast must be placed in the 90° position.

Change the oil when the Superlift mast is in the 90° position.

- Turn the top drum so that the protective bolt (7) can be seen through the hole (17) in the frame.
- Unscrew the protective bolt (7).
- Screw oil drain pipe (6) into hole (17).
- Position container for catching old oil.
- Unscrew plug (8) through the oil drain pipe (6).
- Unscrew oil level check plug (27).
- Allow old oil to drain off into the prepared container.

Dispose of old oil in an environmentally safe manner.

- Unscrew and clean oil drain pipe (6).
- Screw in cleaned plug (8).
- Tighten protective bolt (7).
