## **Deployable Structures Author Sergio Pellegrino May 2002:**

**Deployable Structures** S. Pellegrino, 2002-02-06 Deployable structures can vary their shape automatically from a compact packaged configuration to an expanded operational configuration. The first properly engineered deployable structures were used as stabilization booms on early spacecraft. Later on more complex structures were devised for solar arrays, communication reflectors and telescopes. In other fields there have been a variety of developments including retractable roofs for stadia, foldable components for cars, portable structures for temporary shelters and exhibition displays. Three main themes are discussed in this book: concepts, working principles and mechanics of deployable structures both in engineering and biology; in addition, theory of foldable bar structures and application to deployable tensegrities; formulation of large rotation analysis of deployable structures and finite element simulation methods. Proceedings of the 36th Aerospace Mechanisms Symposium, 2002. Forms and Concepts for Lightweight Structures Koryo Miura, Sergio Pellegrino, 2020-03-26. Covering a wide range of structural concepts and presenting both relevant theories and their applications to actual structures, this book brings together for the first time lightweight structures concepts for many different applications and the relevant scientific literature, thus providing unique insights into a fascinating field of human endeavour. Evolved from a series of graduate courses taught by the authors at the University of Tokyo, the Institute of Space and Astronautical Science, the University of Cambridge and the California Institute of Technology, this textbook provides both theoretical and practical insights and presents a range of examples which also provide a history of key lightweight structures since the Apollo age. This essential guide will inspire the imagination of engineers and provide an analytical foundation for all readers. New Approaches to Structural Mechanics, Shells and Biological Structures Horace R. Drew, Sergio Pellegrino, 2002-09-30. This Festschrift marks the retirement of Professor Chris Calladine FRS after 42 years on the teaching staff of the Department of Engineering, University of Cambridge. It contains a series of papers contributed by his former students, colleagues and friends. Chris Calladine's research has ranged very widely across the field of structural mechanics, with a particular focus on the plastic deformation of solids and structures and the behaviour of thin shell structures. His insightful books on Engineering Plasticity and Theory of Shell Structures have been appreciated by many generations of students at Cambridge and elsewhere. His scientific contribution outside engineering in molecular structures is at least as significant, and he is unique among engineers in having co-authored a book on DNA. Also, he has been keenly interested in the research of many students and colleagues, and on many occasions his quick grasp and physical insight have helped a student and sometimes a colleague find the nub of the problem without unnecessary effort. Many of the papers contained in this volume gratefully acknowledge this generous contribution. We thank Professor G M I Gladwell for reading through all of the contributions, Mrs R Baxter and Mrs O Constantinides for help in preparing this volume, Godfrey Argent Studio for permission to reproduce Calladine's portrait for the Royal Society, and Dr A Schouwenburg from Kluwer for his assistance. Chris Laszlo, Karen Christensen, Daniel S. Fogel, Gernot Wagner, Peter J. Whitehouse, 2010-01-01 The Business of  
Sustainability is a core resource for policy makers members of the development community entrepreneurs and corporate  
executives as well as business and economics students and their professors It contains rich analysis of how sustainability is  
being factored into industries across the globe with enlightening case studies of businesses serving as agents of change  
Contributing authors provide a groundbreaking body of research based knowledge They explain that the concept of  
sustainability is being re framed to be positive about business instead of being tied to the old notion of a trade off between  
business and society that is if business wins society and the environment must lose and they explore how economic  
development can contribute to building our common future *ASCE Combined Index* American Society of Civil
