Concentration Of Measure For The Analysis Of Randomized Algorithms:

Concentration of Measure for the Analysis of Randomized Algorithms Devdatt Dubhashi, 2009 Randomized algorithms have become a central part of the algorithms curriculum based on their increasingly widespread use in modern applications This book presents a coherent and unified treatment of probabilistic techniques for obtaining high probability estimates on the performance of randomized algorithms It covers the basic toolkit from the Chernoff Hoeffding bounds to more sophisticated techniques like martingales and isoperimetric inequalities as well as some recent developments like Talagrand's inequality transportation cost inequalities and log Sobolev inequalities Along the way variations on the basic theme are examined such as Chernoff Hoeffding bounds in dependent settings The authors emphasise comparative study of the different methods highlighting respective strengths and weaknesses in concrete example applications The exposition is tailored to discrete settings sufficient for the analysis of algorithms avoiding unnecessary measure theoretic details thus making the book accessible to computer scientists as well as probabilists and discrete mathematicians

Williamson, 2019-09-05 Network flow theory has been used across a number of disciplines including theoretical computer science operations research and discrete math to model not only problems in the transportation of goods and information but also a wide range of applications from image segmentation problems in computer vision to deciding when a baseball team has been eliminated from contention This graduate text and reference presents a succinct unified view of a wide variety of efficient combinatorial algorithms for network flow problems including many results not found in other books It covers maximum flows minimum cost flows generalized flows multicommodity flows and global minimum cuts and also presents recent work on computing electrical flows along with recent applications of these flows to classical problems in network flow theory **On the Power of Small-Depth Computation** Emanuele Viola, 2009 In this work we discuss selected topics on small depth computation

presenting a few unpublished proofs along the way The four sections contain 1 A unified treatment of the challenge of exhibiting explicit functions that have small correlation with low degree polynomials over $\mathbb{F}_2$ 2 An unpublished proof that small bounded depth circuits AC_0 have exponentially small correlation with the parity function The proof is due to Klivans and Vadhan it builds upon and simplifies previous ones 3 Valiant's simulation of log depth linear size circuits of fan in 2 by sub exponential size circuits of depth 3 and unbounded fan in To our knowledge a proof of this result has never appeared in full 4 Applebaum, Ishai and Kushilevitz's cryptography in bounded depth

Dimensionality Reduction in Data Science

Max Garzon, Ching-Chi Yang, Deepak Venugopal, Nirman Kumar, Kalidas Jana, Lih-Yuan Deng, 2022-07-28 This book provides a practical and fairly comprehensive review of Data Science through the lens of dimensionality reduction as well as hands on techniques to tackle problems with data collected in the real world State of the art results and solutions from statistics computer science and mathematics are explained from the point of view of a practitioner in any domain science such as biology cyber security chemistry sports science and many others Quantitative and qualitative assessment methods are described to implement and validate the solutions back in the real world where the problems originated The ability to generate gather and store volumes of data in the order of tera and exo bytes daily has far outpaced our ability to derive useful information with available computational resources for many domains This book focuses on data science and problem definition data cleansing feature selection and extraction statistical geometric information theoretic biomolecular and machine learning methods for dimensionality reduction of big datasets and problem solving as well as a comparative assessment of solutions in a real world setting This book targets professionals working within related fields with an undergraduate degree in any science area particularly quantitative Readers should be able to follow examples in this book that introduce each method or technique These motivating examples are followed by precise definitions of the technical concepts required and presentation of the results in general situations These concepts require a degree of abstraction that can be followed by re interpreting concepts like in the original examples Finally each section closes with solutions to the original problems afforded by these techniques perhaps in various ways to compare and contrast disadvantages to other solutions
