

Addiction vs. Dependence

- Driven by changes in the brain's reward and motivation systems
- Dopamine circuits in the ventral tegmental area (VTA) and nucleus accumbens are overstimulated, reinforcing compulsive behaviors
- Involves prefrontal cortex impairments, leading to poor decision-making and loss of control

- Primarily involves physical adaptations in the thalamus and basal ganglia
- Tolerance develops as the brain reduces its natural production of certain neurotransmitters in response to substance use
- Withdrawal symptoms arise when substance use stops, disrupting the brain's chemical balance

Contemporary Health Issues on Marijuana Kevin A. Sabet, Ken C. Winters, 2018-06-01 Marijuana is

the most commonly used illicit drug in the United States A growing number of Americans now perceive marijuana as relatively harmless and the notion that the drug should be legalized it is becoming increasingly popular As policy in this area remains dynamic resulting health issues including the harm to adolescents and the potential for compounds to have therapeutic value become more salient Contemporary Health Issues on Marijuana is a balanced empirically driven volume that highlights new and meaningful theory and evidence pertaining to marijuana use Authored by a multidisciplinary group of experts from the fields of psychology epidemiology medicine and criminal justice chapters comprehensively review numerous research domains of public health interest with respect to marijuana use including the drug s impact on cognitive and neurological functioning its medical effects treatment approaches for cannabis use disorders the effects of marijuana smoking on lung function and marijuana impaired driving The book concludes with a chapter on policy implications taking stock of current trends and anticipating prevalence rates and resulting health consequences that will only continue to grow Contemporary Health Issues on Marijuana is a resource of great clinical scientific and public policy value that will be a must have for researchers practitioners and policymakers alike

Marijuana Addiction Heather Travis, The conversation around marijuana has shifted dramatically in recent decades What was once universally condemned as a dangerous drug has become increasingly accepted legalized and even celebrated in many parts of the world This transformation has brought numerous benefits from reduced incarceration rates to legitimate medical applications that have helped countless patients manage pain nausea and other debilitating conditions However within this wave of acceptance and normalization a critical issue has become obscured the very real potential for marijuana addiction Cannabis use disorder the clinical term for marijuana addiction affects millions of people worldwide yet it remains one of the most misunderstood and minimized forms of substance dependence The pervasive belief that marijuana is completely harmless and non addictive has created a dangerous blind spot in our collective understanding of this plant s potential risks This misconception is particularly troubling because it prevents many people from recognizing their own problematic relationship with cannabis and seeking the help they need The statistics paint a sobering picture Research indicates that approximately 9% of people who use marijuana will develop dependence but this number rises dramatically under certain circumstances Among those who begin using in adolescence the rate jumps to 17% For daily users the likelihood of developing cannabis use disorder can exceed 25% to 50% These figures represent millions of individuals whose lives have been significantly impacted by their inability to control their marijuana use despite repeated attempts to cut back or quit entirely
