

Film Loading and Projection

1 Before loading, check the end of the film. If it is bent or there is any foreign substance on the film, cut this section off with the attached film cutter. Place the film on the cutter and then cut by pressing down the tip of the cutter.

2 When the leader end of the film is too short, splice an additional section of film to the leader. When splicing, be sure to splice the two film ends in the same curling direction. Be careful not to cover the film perforations with the splicing tape.

3 Lift up the reel holding catch on the supply reel shaft. Mount the supply reel onto the reel shaft so that the leader hangs down toward the front of the projector. Align any one of the reel key grooves on the supply reel with the projection on the supply reel shaft, and lock the supply reel in place by bending back the reel holding catch.

4 Turn the rotary switch to "MOTOR".

5 Thread the film through the two film guides in such a manner as to prevent the film from flapping. Then insert the film into the film inserting slot for approximately 7cm (2-3/4") until it is caught by the claw mechanism.
