METHOD OF OPERATION

(FOR DETAILS SEE PAGES 1 AND 2)

A loaded magazine is placed in the handle, and the slide drawn fully back and released, thus bringing the first cartridge into the chamber, leaving the hammer cocked and the pistol ready for firing.

If it is desired to carry the pistol fully cocked, the safety lock may be pressed upward, thus positively locking hammer and slide. The safety lock is located within easy reach of the thumb of the hand holding the pistol and may be instantly pressed down, when raising the pistol to the firing position.

To lower the cocked hammer, draw it back with the thumb until it forces the grip safety in flush with the frame, at the same time pull the trigger, then lower the hammer with thumb.

SAFETY DEVICE

It is impossible for the firing pin to discharge or even touch the primer, except on moving the full force of the hammer.

The pistol is provided with one automatic safety device:

The automatic disconnector which positively prevents the release of the hammer unless the slide and barrel are in the forward position and safety interlocked; this device also prevents the firing and prevents more than one shot from following each pull of the trigger.

The automatic grip safety, which at all times holds the trigger unless the handle is firmly gripped and the grip safety moved in.

The pistol is in addition provided with a safety lock by which the pistol slide and the cocked hammer may be at will positively locked in position.
